# The Players

#### Replica

Checked almost every box

#### Streetlight

Lacked multimodal and demographic information

#### **INRIX**

Already use and are the source information for most options

#### What is Replica?

#### **Places**

Interactive map with filters and summaries of trips and people for a modeled season

#### **Trends**

Weekly updates of O-Ds, VMT, and spending

#### **Traffic Data**

AADT, turning movements, volume and speed profiles

#### Can it be Trusted?

Replica utilizes most of the same data sources we are already using to create our regional travel demand model. "Big Data" observations are used to enhance the model.

- American Community Survey (ACS)
- Public Use Microdata Sample (PUMS)
- Longitudinal Employer-Household Dynamics Data (LEHD)
- Census Transportation Planning Product (CTPP)
- National Center for Education Statistics (NCES)
- OpenStreetMap (OSM)
- General Transit Feed Specification (GTFS)
- Counts (INRIX or supplied locally)
- Parcel and Building Footprints

Plus

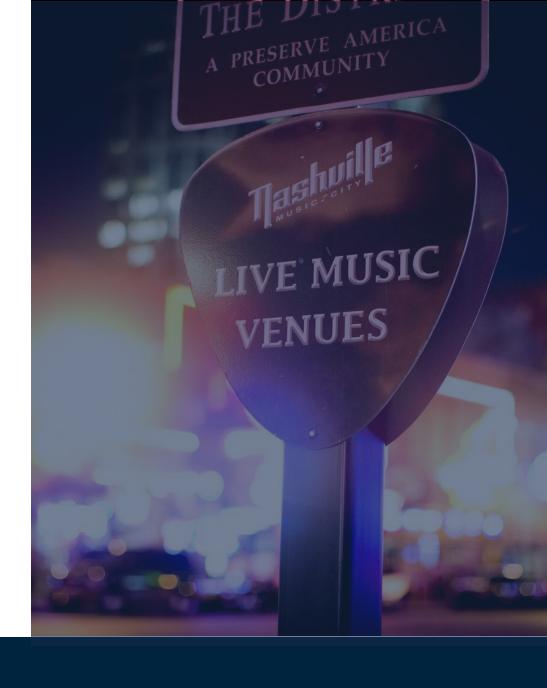

- Location-Based Services (LBS)
- Various Transaction Data

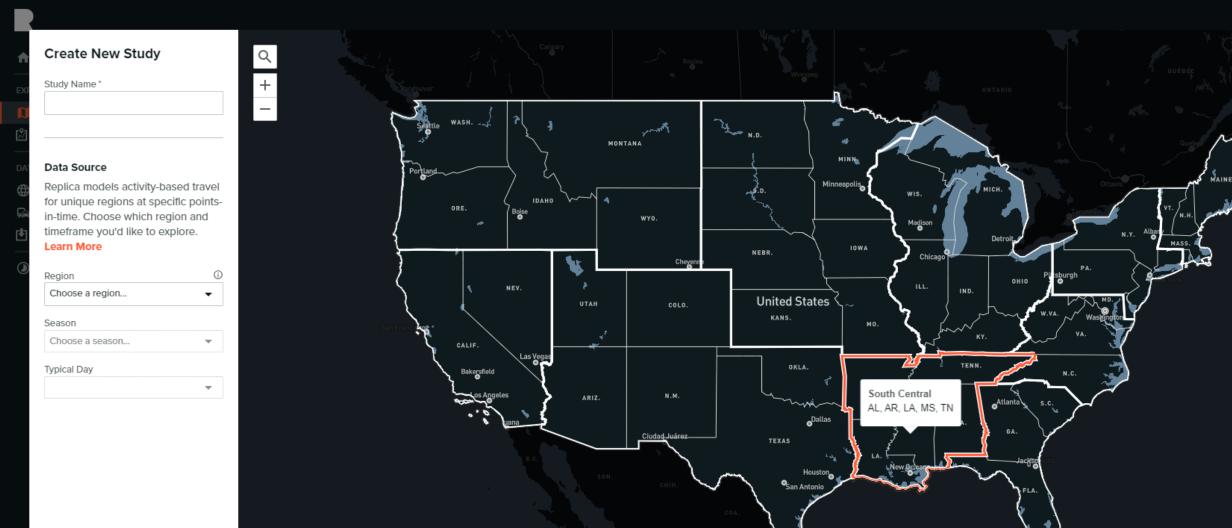

# Replica Places

A seasonal activity based model for megaregions. It is available for the entire United States with models back to 2019. Each model provides multimodal output for typical weekday and weekend day.

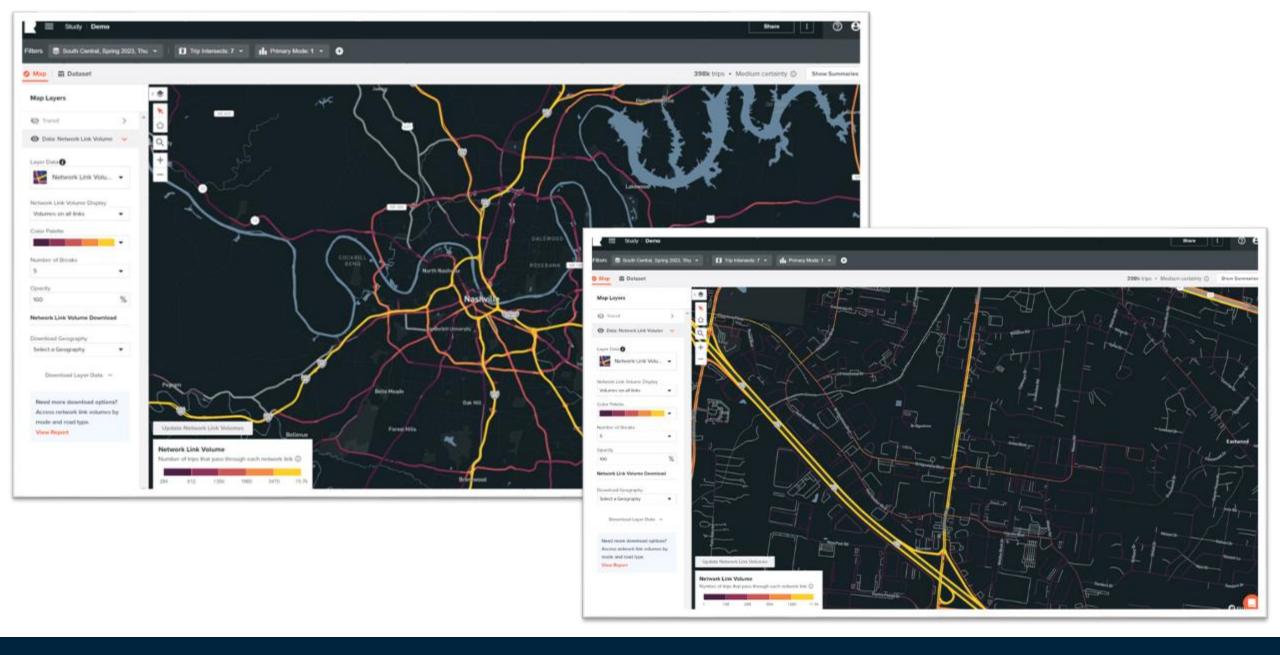

- Interactive map
- Filterable trips, persons, and geographies
- Summary information
- Loaded network for all modes
- Complete trip and person tables

# Replica Trends

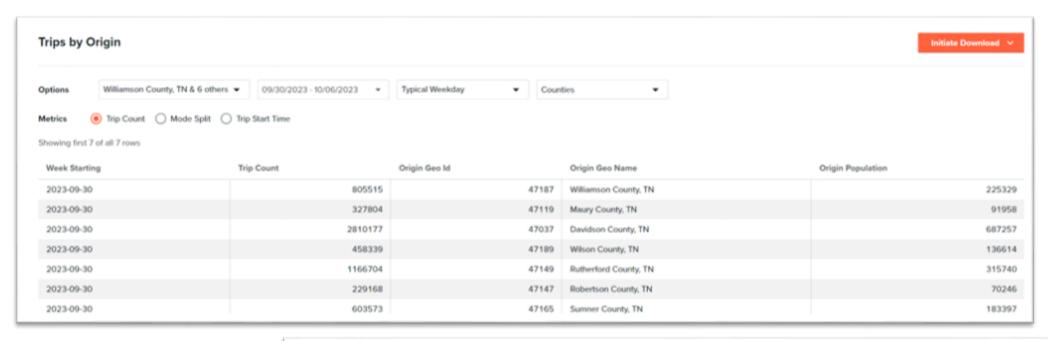

A weekly model for monitoring. It is available for the entire United States with models back to 2019. Each model provides output for typical weekday and weekend day.

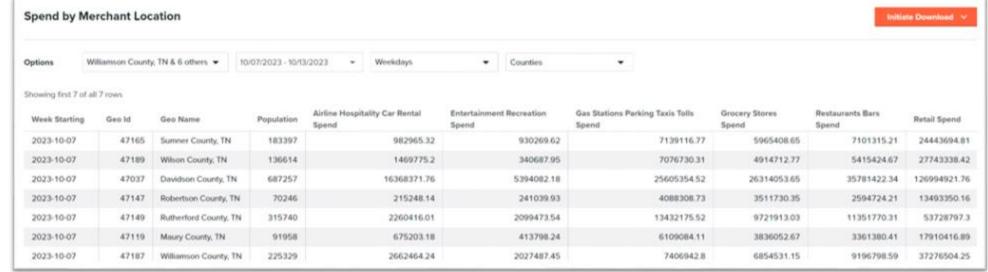

- Origins-Destinations
- Mode Share
- Trip Start Time
- Residential Vehicle Miles Traveled (VMT)
- Spend by Merchant and Home Location
- Spend by Online and Brick and Mortar

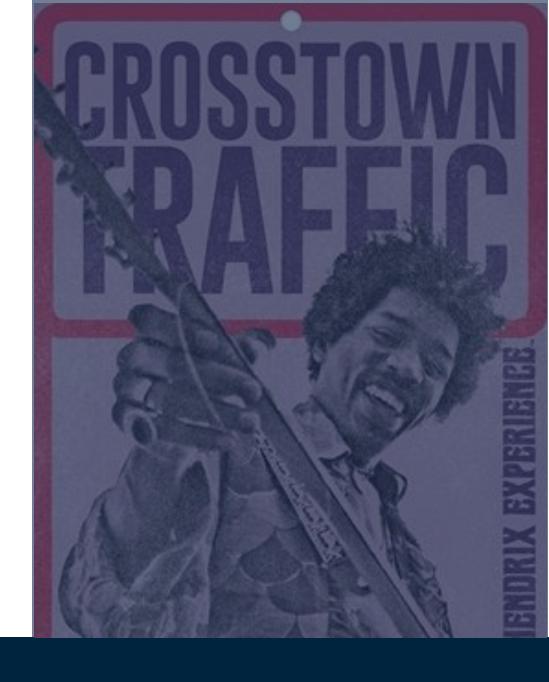

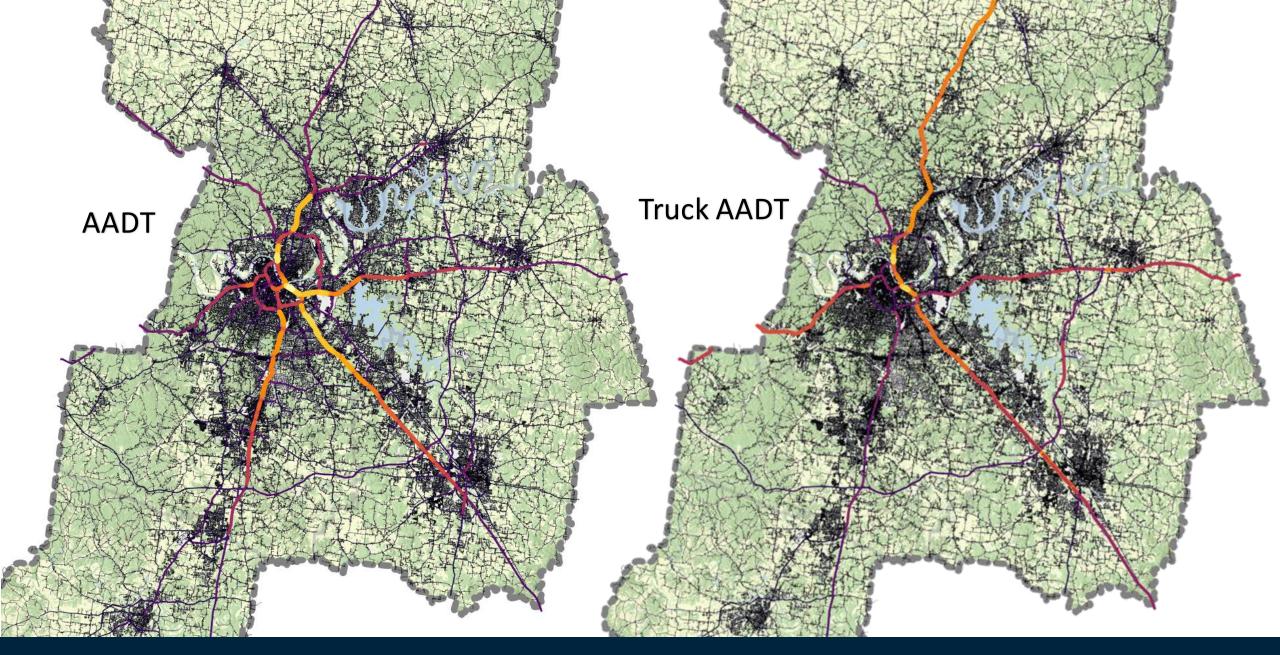

# Replica Traffic Data

Annual model for monitoring and reference. It is available for the entire United States with models back to 2019. Aside from AADT, each model provides output for typical weekday and weekend day.

- Annual Average Daily Traffic (AADT)
- Free Flow Speeds
- Hourly Auto Volume Profile
- Quarter Hourly Speeds Profile
- Turning Movement Counts

## Fans (60+ users)

#### **GNRC Staff**

Travel demand and land use models, monitoring congestion, comprehensive plans, economic development, aging and disability, local and media inquiries

#### **Transit Agencies**

System analysis, identification of potential expansion, better understanding of roadway conditions

#### **Local Governments and Consultants**

Safety analysis, active transportation demand, impact analysis, monitoring of congestion, better understanding of mobility needs

#### How Have We Been Using Replica?

#### **Updating Travel Demand Model**

Reference data as model input and modeled data in calibration

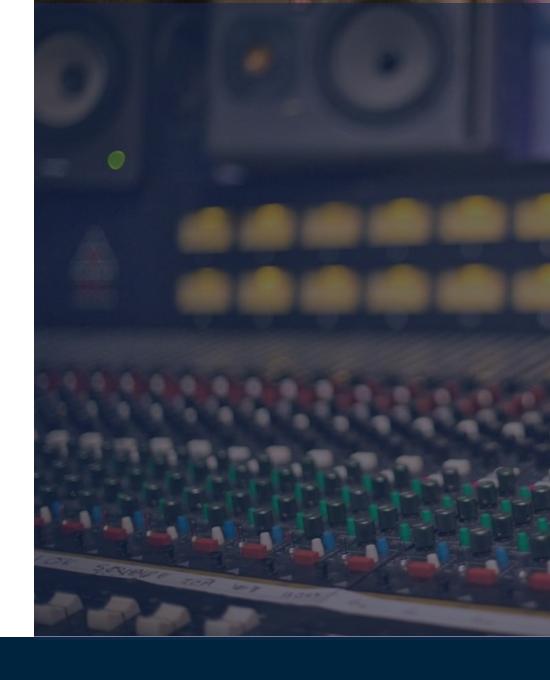

#### **Locating Potential Transit Riders**

Finding transit dependent populations

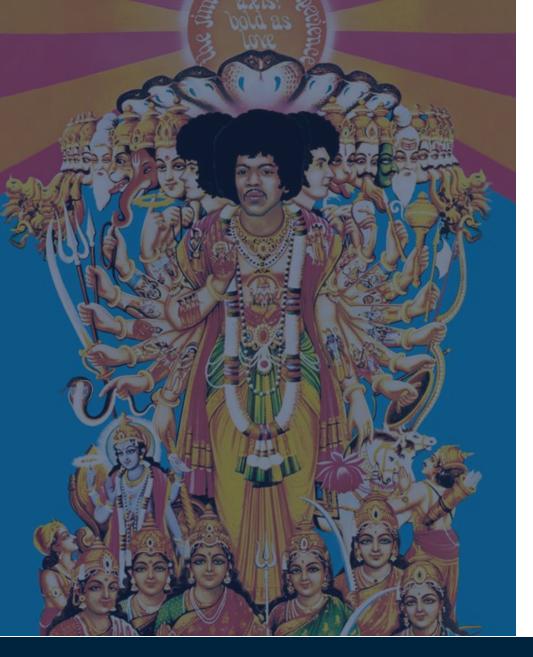

#### **Profiling a Corridor**

How should a roadway be designed based on its users

#### How Else Can Replica be Used?

Replica provides detailed outputs that can be used beyond traditional regional transportation planning.

- Peer Analysis
- **Market Characteristics**
- Land Use and Built Environment
- Safety
- Freight
- Parking
- Economic Impact

- Traffic Impact
- Workforce
- Electric Vehicle
- Transportation Network Company (TNCs)
- Housing
- Equity
- Transit Demand

# **Updating TDM**

GNRC is using Replica to update assumptions in travel behaviors to supplement an outdated household travel survey. Also provides significant time savings on data collection and processing.

- Origins-Destinations
- Mode Share
- Trip/tour Purposes
- Trip Length and Time
- Time of Day Distribution
- Freight Movements
- Telecommuting

GREATER NASHVILLE REGIONAL COUNCIL

NASHVILLE 2017 ACTIVITY-BASED MODEL UPDATE

**FINAL** 

October 2, 2020

PREPARED FOR:
GREATER NASHVILLE REGIONAL COUNCIL

600 B Street, Suite 2202 RSG

600 B Street, Suite 220 San Diego, CA 9210 619.501.055

#### **Locating Potential Transit Riders**

Transit agencies are using Replica to identify new markets for potential service expansion. By understanding where transit dependent populations live and work, services can be tailored for efficiency.

- Income
- Auto Ownership
- Trip Purpose
- Time of Commute
- Existing Ridership
- Travel Times

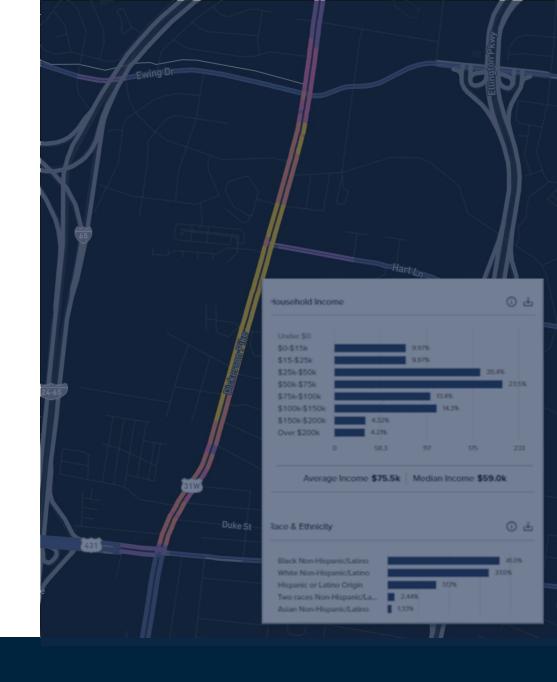

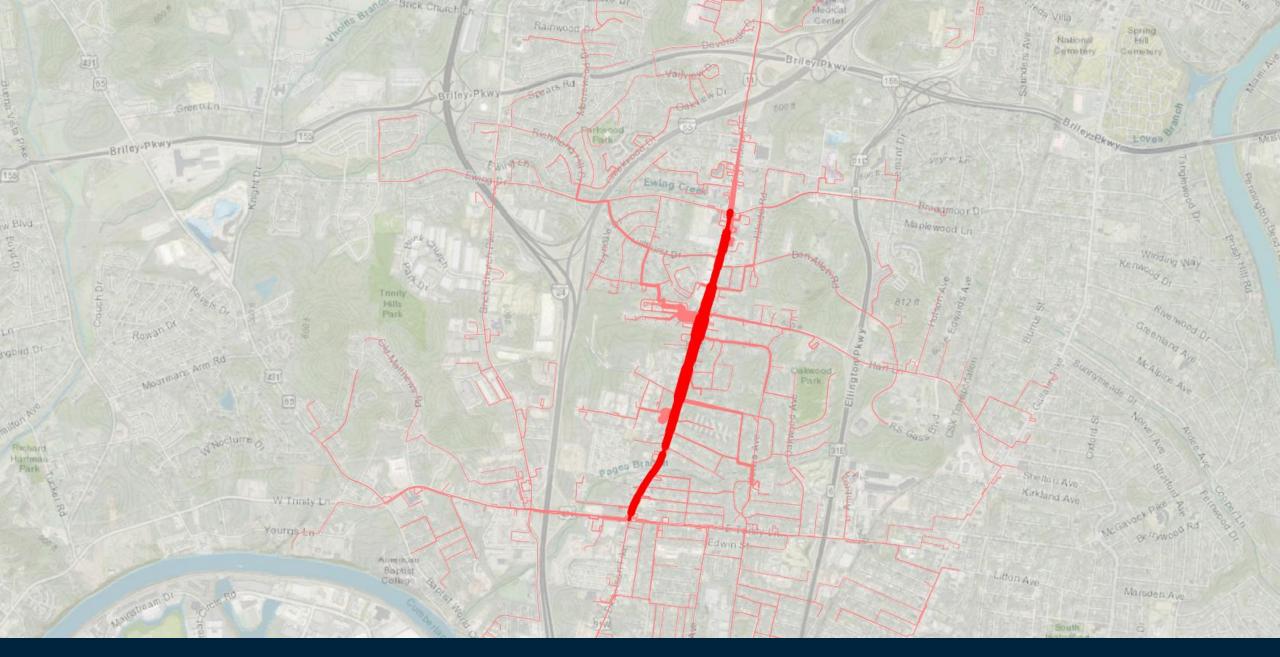

# Profiling a Corridor

Local agencies are using Replica understand the users of a corridor of interest. By having a clear picture of who is using a roadway segment, it can be designed to best serve its users.

- Demographics
- Mode
- Trip Purpose
- Origins and Destinations
- Loaded Network with Local Streets
- Time of Day

# Liner Notes

#### Is Replica a One Hit Wonder?

### Provides Speed, Volumes, and Turning Movements

Similar to INRIX through RITIS platform currently using for system monitoring. Multimodal volumes and turning movements previously unavailable will improve prioritization tools and studies.

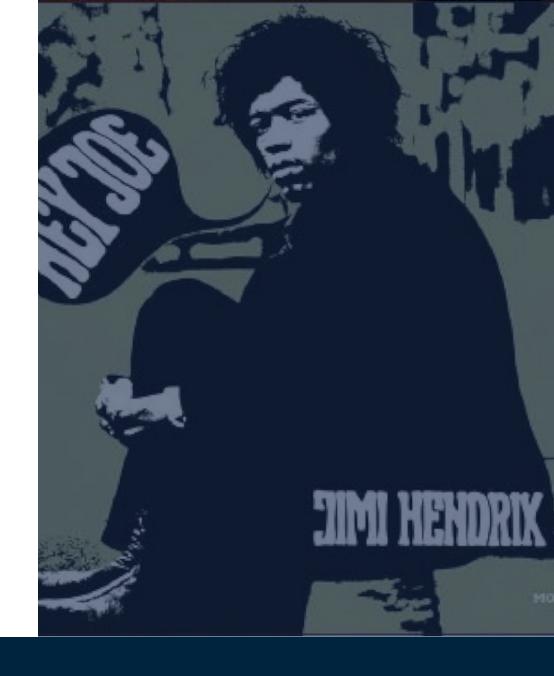

#### Demographic, Spend and Trip Data

Understanding of users and how they traverse the transportation system without effort and time involved to update regional TDM.

#### **Always Adding Features**

Replica is ever evolving to create new features and functions

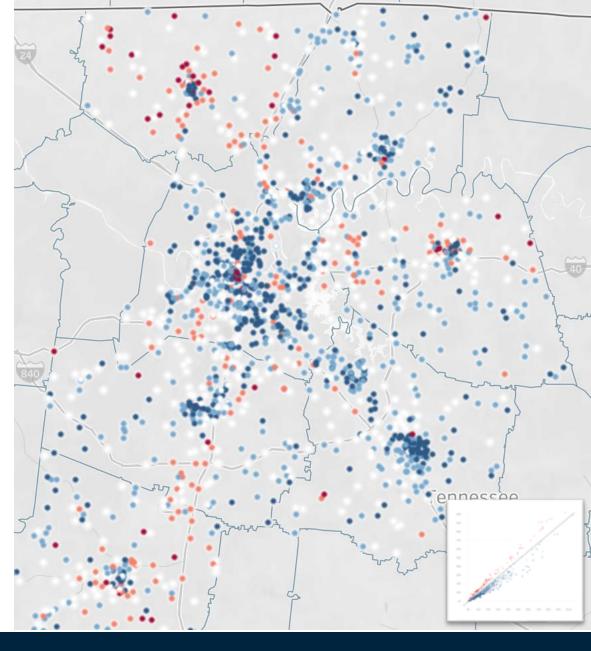

## Performance

Overall, the performance of Replica has been acceptable. Urban areas seem to be underestimated and rural areas tend to be overestimated. We also noted several locations where counts appeared significantly different.

- Compared TDOT AADT to Replica 2022 AADT
- AADT  $R^2 = 0.952$
- Replica count incorrectly tagged bidirectional
- Historic TDOT counts indicate that many counts are possible
- DVMT undercount by 4.5M or -7.6%

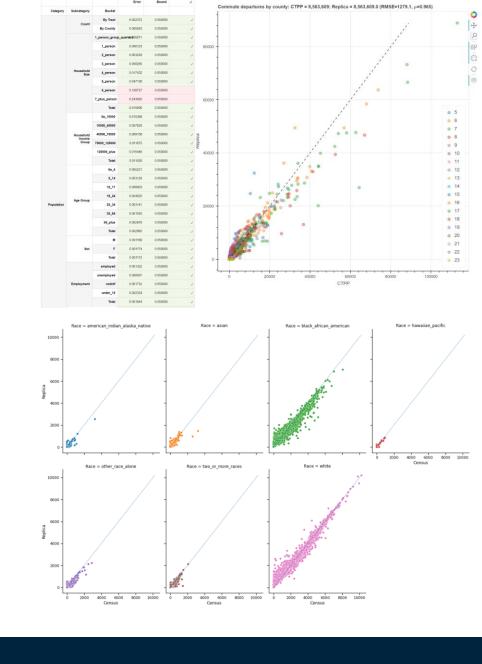

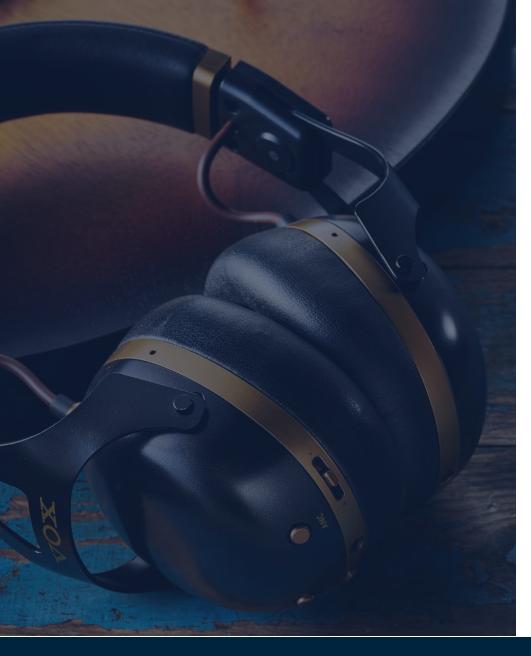

## Performance

#### Resources and documentation of results:

- Seasonal Quality Reports (http://help.replicahq.com/en/articles/5503665-south-central-quality-reports)
- GNRC AADT Validation Segments (https://public.tableau.com/app/profile/gnrc/viz/ReplicaValidationv2/Dashboard1)
- GNRC AADT Validation Ramps (https://public.tableau.com/app/profile/gnrc/viz/ReplicaValidationRamp/Dashboard1)

# Can Quality Improve?

#### **Improve Local Data**

Every seasonal model can improve by submitting local data. This could be counts, turning movements, transit feeds, speed profiles, editing OSM.

#### **Export Data**

Mapping and summaries can be limiting. Exporting data to display and analyze is sometimes necessary.

#### **Brainstorm with Replica**

If an issue is identified or you would find a feature helpful, the Replica team is willing to discuss anything to improve their product.

Are you experienced?

Have you ever been experienced?

Well, I have
