

# TDOT Statewide Model in Application and Development

July 15, 2015

# Agenda

- Introduction to TSTM v2
- Subarea Analysis with TSTM v2: ATRI Truck Trip Tables for MPOs
- ATRI vs. Transearch and What the Differences Mean
- Update on Phase 3

## Introduction to TSTM v2

# Directory Structure

- Documentation
  - Phase 1 Technical Documentation
  - TSTM V2 Technical Memo & Network Management
  - Data Dictionary
- Model Files
- Scenario
  - Inputs/Outputs generated from model run

# Model Files Directory

- Master Network
  - Contains scenario tables & files
- TAZ
- Pivoting
  - Static files used in pivoting (LEHD, ATRI, ODME)
- Parameters
- Images
- Other
  - Auxiliary files for post processing & reporting

# Scenario Directory

- Zones
- Network
- Trip Generation
- Trip Distribution
- Pivoting
- Vehicle Assignment
- Reports

# TAZ & Network

# Field Standardization

| Field         | Description  |
|---------------|--|
| ID            | TransCAD identifier  |
| Length        | Area in miles  |
| Dir           | Directionality   |
| Label         | User-defined label for Post-processing                       |
| Category      | Derived from TAZ category field                              |
| Region        | Derived from TAZ region field                                |
| MPO           | Derived from TAZ MPO field                                   |
| STATE         | Two letter state abbreviation                                |
| COUNTYID      | FIPS County Code   |
| COUNTY        | County Name  |
| ADM_SYS       | Ownership (TRIMS)  |
| RTE_NME       | Route Name (TRIMS)   |
| RAMP          | Ramp Identifier  |
| SYSRAMP       | System Ramp Identifier                                       |
| FUNCCCLASS    | TRIMS Functional Classification Code                         |
| SPD_LMT       | Speed Limit (TRIMS)  |
| ACCESS        | Roadway Access Control<br>1: None<br>2: Partial<br>3: Full   |
| MEDIAN        | Median identifier (TRIMS)                                    |
| DIVIDED       | Divided Freeway or Multilane Identifier                      |
| NBR_LANES     | Number of Lanes (TRIMS)                                      |
| THRU_LANES    | Through Lanes (TRIMS)  |
| LN1DIR        | Directional Lanes  |
| HOVAMLN       | AM HOV Restriction Lane                                      |
| HOVPLMN       | PM HOV Restriction Lane                                      |
| REVERSELN     | Reversible Lane (TRIMS)                                      |
| LN_WIDTH      | Lane Width (TRIMS)   |
| TWOTURNLN     | Two-Way Center Left Turning Lanes (TRIMS)                    |
| RS_WIDTH      | Right Shoulder Width   |
| WATER_X       | Water Crossing Identifier                                    |
| RAIL_X        | Railroad Crossing Identifier                                 |
| CC            | Centroid Connector Identifier                                |
| TAZID         | Centroid Connector TAZ identification field                  |
| FFTIME        | Free-Flow Running Time (minutes)                             |
| A/B_Control   | Approach Control (see node definition)                       |
| A/B_Priority  | Node Approach Priority                                       |
| A/B_Synch     | Directional Synchronization                                  |
| WalkTime      | Walk Time (minutes)  |
| FFSpeed       | Free-Flow Running Speed (mph)                                |
| AB/BA_AFFTime | Adjusted Free-Flow Time with uniform control delay (minutes) |
| AB/BA_AFFSpd  | Adjusted Free-Flow Speed (mph)                               |
| AB/BA_UCDelay | Uniform Control Delay (minutes)                              |
| PKHrLnCap     | Peak-Hour Lane Capacity                                      |
| AB/BA_DlyCap  | Daily Capacity   |
| AB/BA_AMCap   | AM Period Capacity   |

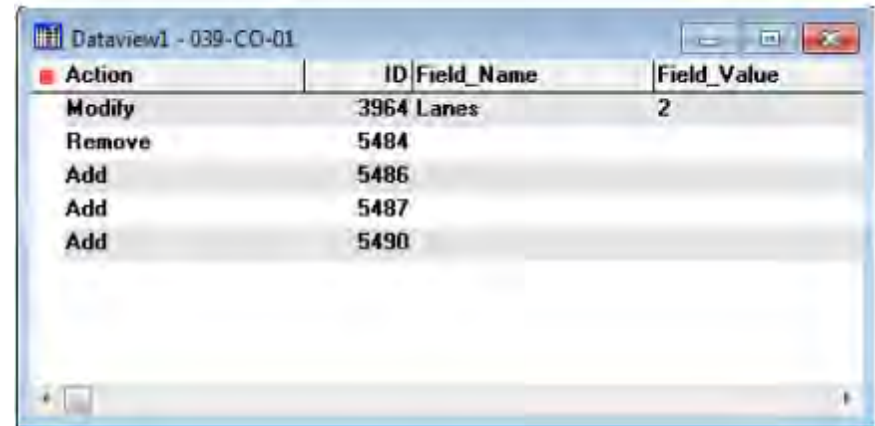

| Field      | Description   |
|------------|---|
| ID         | TransCAD identifier   |
| Area       | Area in square miles  |
| TAZID      | TAZ identifier  |
| MPO        | MPO of the area   |
| CATEGORY   | 1 - Rural counties<br>2 - Urban counties<br>3 - MPO areas outside TN<br>4 - Single Counties outside TN<br>5 - County Groups outside TN<br>6 - External Stations |
| REGION     | TN Region Identifier  |
| COUNTYID   | FIPS county code  |
| STATEID    | FIPS state code   |
| TOTPOP     | Total Population  |
| HHPOP      | Household Population  |
| GQPOP      | Group Quarter Population  |

| NearAccess | Near Accessibility Variable   |

# Network Management

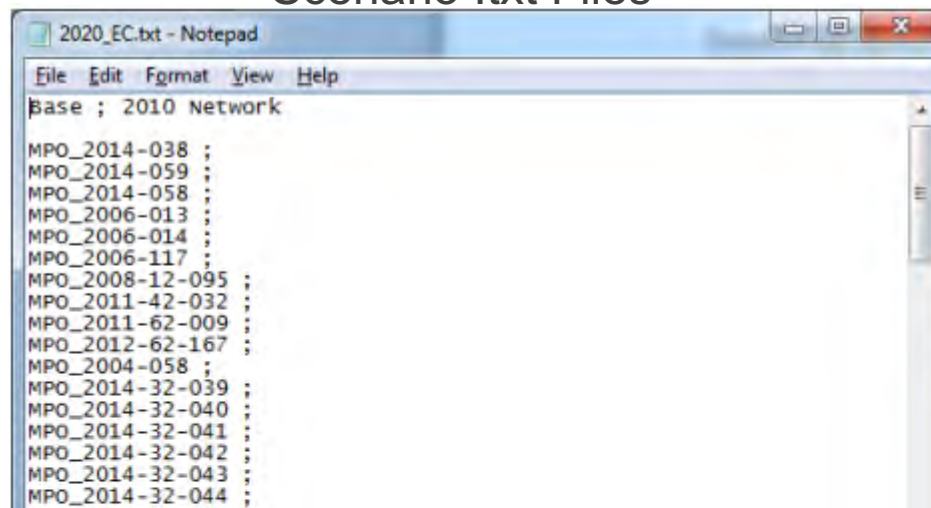

## Project .bin Files

| Action | Description                      |
|--------|----------------------------------|
| Add    | Adds a link to the scenario      |
| Remove | Removes a link from the scenario |
| Modify | Alters the indicated link field  |
| Node   | Alters the indicated node field  |

| Action | ID   | Field_Name | Field_Value |
|--------|------|------------|-------------|
| Modify | 3964 | Lanes      | 2           |
| Remove | 5484 |            |             |
| Add    | 5486 |            |             |
| Add    | 5487 |            |             |
| Add    | 5490 |            |             |

# User Interface

# Post-Processing with Pivoting

$$R = \frac{S_f}{S_b}$$

$$R < 0.5 : \quad P_1 = B * R$$

$$R > 2 : \quad P_2 = B + (S_f - S_b)$$

$$R > 0.5 \text{ and } R < 2 : \quad P_3 = \frac{P_1 * (2 - R)}{1.5} + \frac{P_2 * (R - 0.5)}{1.5}$$

- P is the post-processed pivoted volume
- B is the observed base-year counts
- $S_f$  is the modeled/synthetic future year volume
- $S_b$  is the modeled/synthetic base year volume

# AIRPORT – Accessibility Map

- TRI-CITIES REGIONAL AIRPORT (**TRI**)
- CHATTANOOGA METROPOLITAN AIRPORT (**CHA**)
- MCGHEE TYSON AIRPORT (**TYS**)
- MEMPHIS INTERNATIONAL AIRPORT (**MEM**)
- NASHVILLE INTERNATIONAL AIRPORT (**BNA**)
- HUNTSVILLE INTL-CARL T JONES FIELD (**HSV**)
- BARKLEY REGIONAL AIRPORT (**PAH**)
- ASHEVILLE REGIONAL AIRPORT (**AVL**)

# AIRPORT – Population Accessibility

| Time Range |     | Population | % Share | Cum % Share |
|------------|-----|------------|---------|-------------|
| 0          | 20  | 2,193,624  | 35%     | 35%         |
| 20         | 40  | 1,864,149  | 29%     | 64%         |
| 40         | 60  | 1,177,527  | 19%     | 82%         |
| 60         | 80  | 705,088    | 11%     | 94%         |
| 80         | 100 | 335,935    | 5%      | 99%         |
| 100        | 120 | 69,249     | 1%      | 100%        |

80% of the state's population is within a 1-hr drive of a major commercial airport

All of the state's population is within a 2-hour drive of a major commercial airport

# Validation

- One of the best statewide model base year validations in the country

| Volume Range |        | Number of Count Stations | Percent Error | Correlation Coefficient | MAPE        | %RMSE       |              |
|--------------|--------|--------------------------|---------------|-------------------------|-------------|-------------|--------------|
|              |        |                          |               |                         |             | Model       | Standard     |
| 1            | 5,000  | 7,288                    | 10.2          | 0.69                    | 66.8        | <b>91.1</b> | <b>101.4</b> |

| <b>Total</b> |        | <b>12,645</b>            | <b>2.1</b>    | <b>0.97</b>             | <b>47.9</b> | <b>37.0</b> | <b>60.0</b>  |

## **Subarea Analysis with TSTM v2: ATRI Truck Trip Tables for MPOs**

# ATRI Development Review

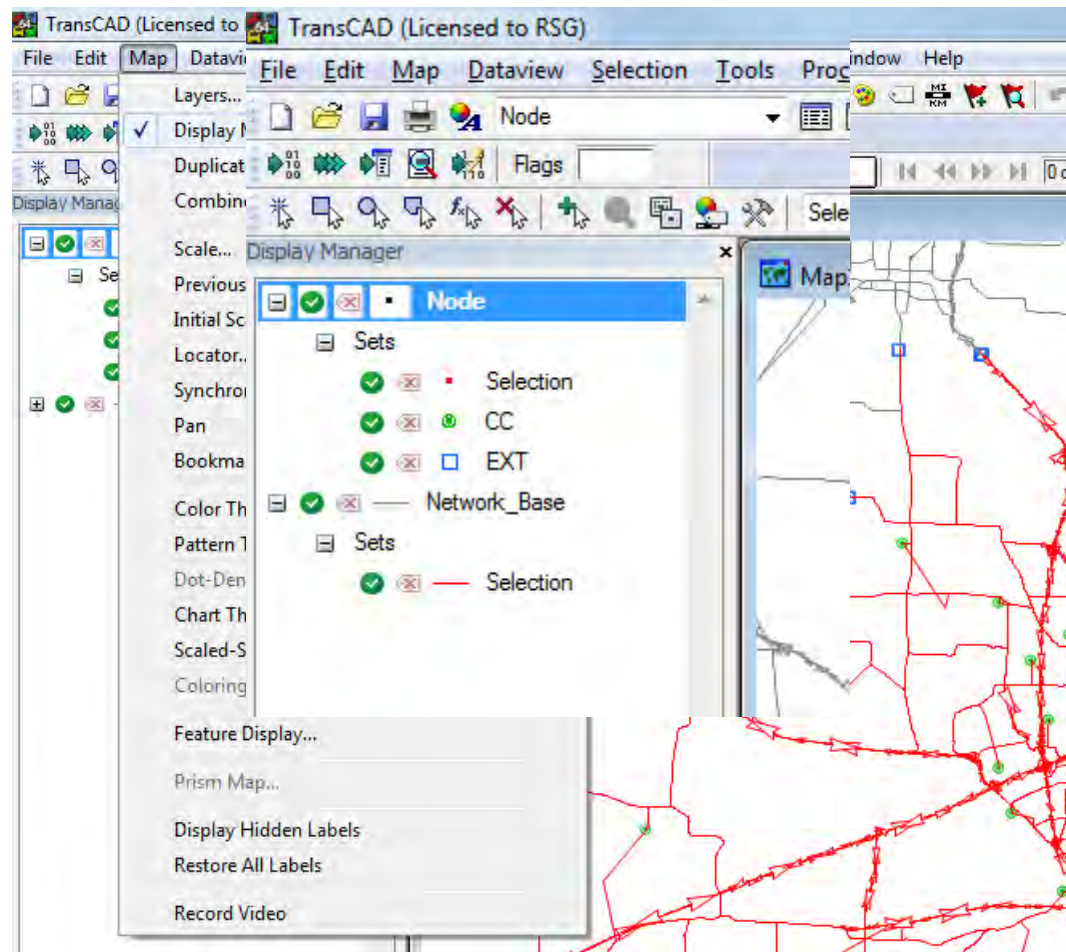

- Truck GPS observations over 8 weeks in 2013
- 235,000 unique trucks
- 6.5 million truck trips (5.7 million after review)
- Final ATRI data 84.1 million VMT
  - Daily average of 1.5 million VMT
- TDOT estimates 14 million multi-unit truck VMT daily
- Represents sample rate of 10.7%
- Expanded based on TDOT truck counts using ODME

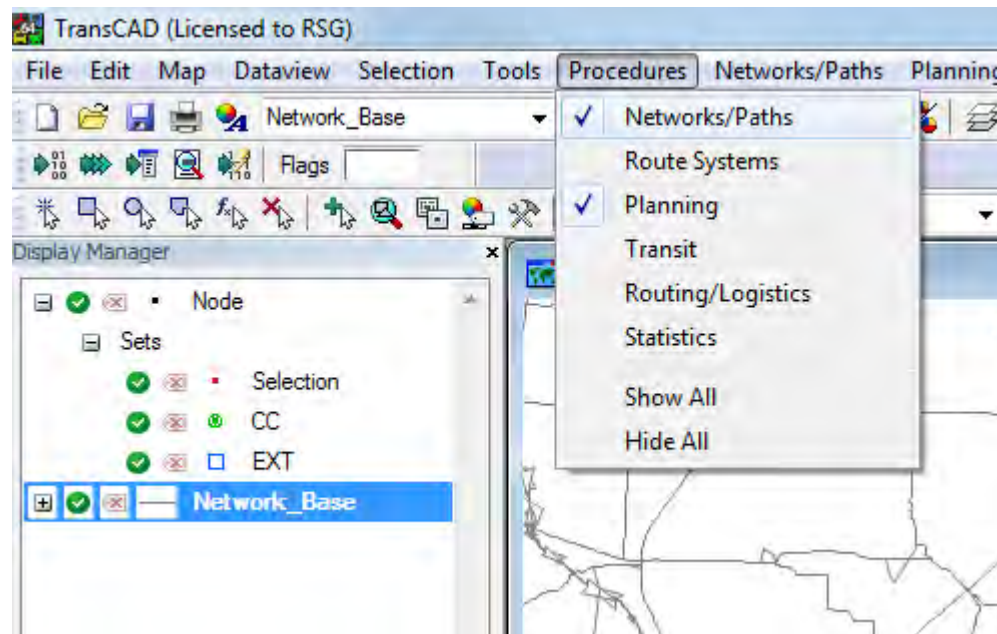

# Overview of Subarea Analysis

- Make Subarea Selection Sets
- Create TransCAD Network (.net) File
- Run Subarea Analysis
- Review TransCAD Subarea Selection
- Aggregate & Disaggregate Subarea Matrix

# TransCAD Display Manager

# Data Preparation

# Data Preparation

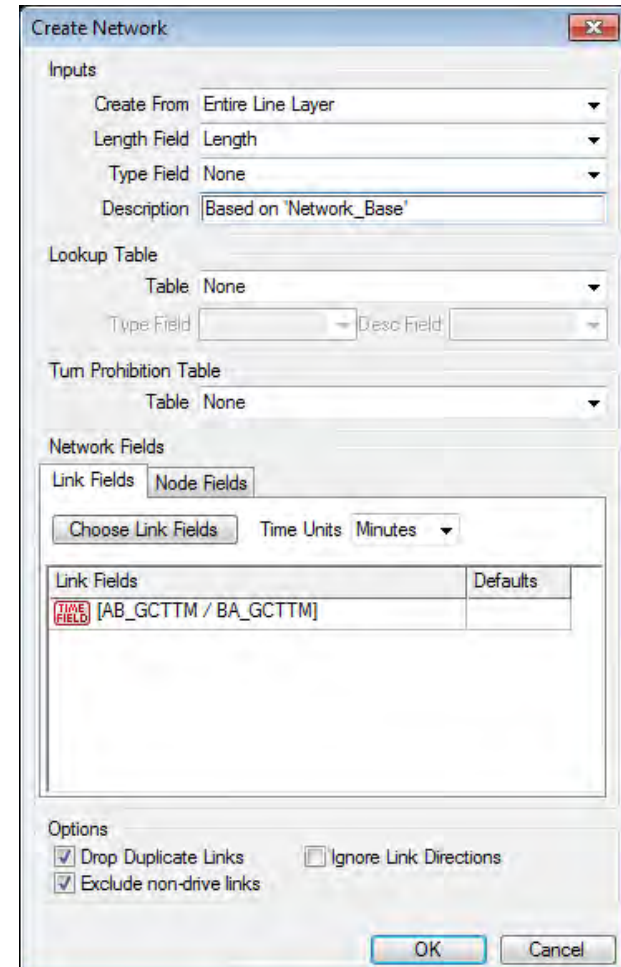

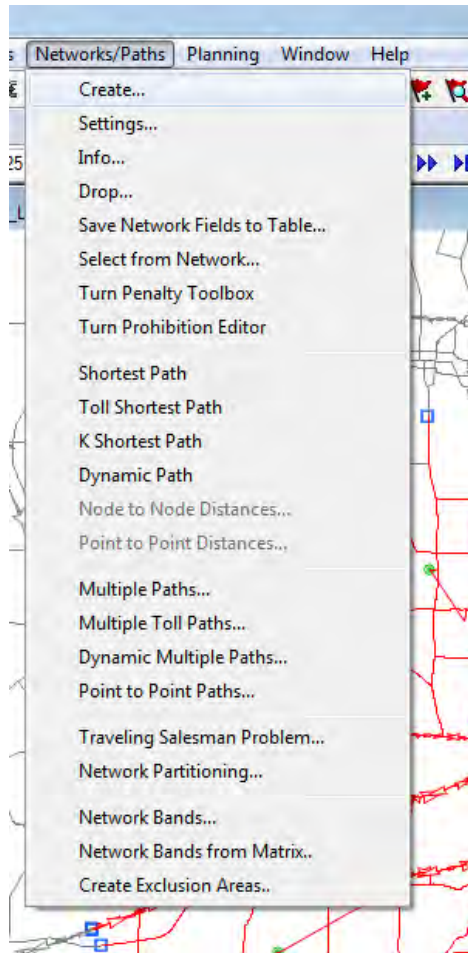

## Selection Sets

- External Stations
- Internal Centroids
- All links

## Expanded ATRI Truck Trip Table

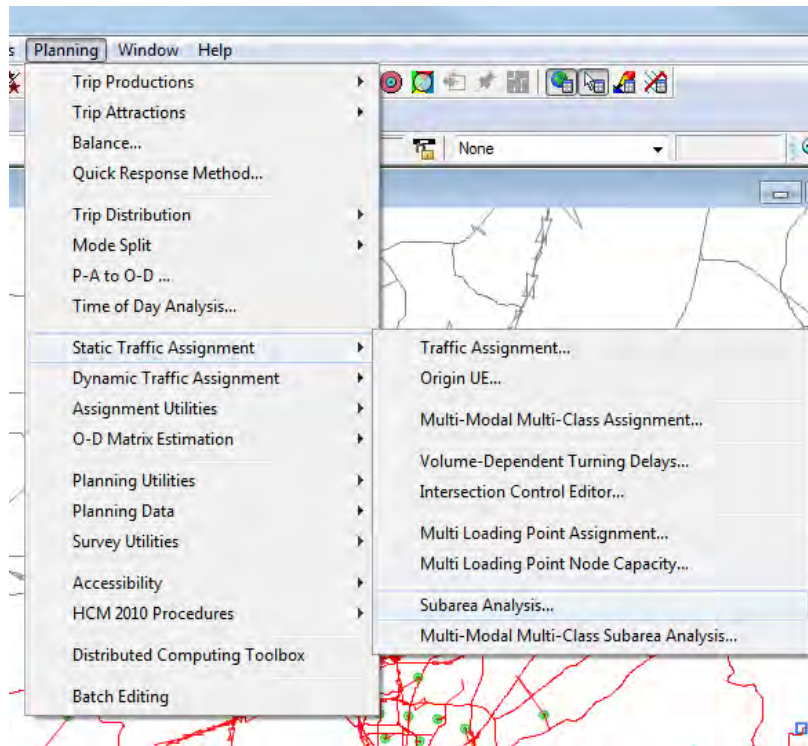

| Matrix - TIV ATRI Scored (Trips) | 1000001 | 1000002 | 1000003 | 1000004 | 1000005 | 1000006 | 1000007 | 1000008 | 1000009 | 1 |
|----------------------------------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---|

# Aggregate & Disaggregate Tables

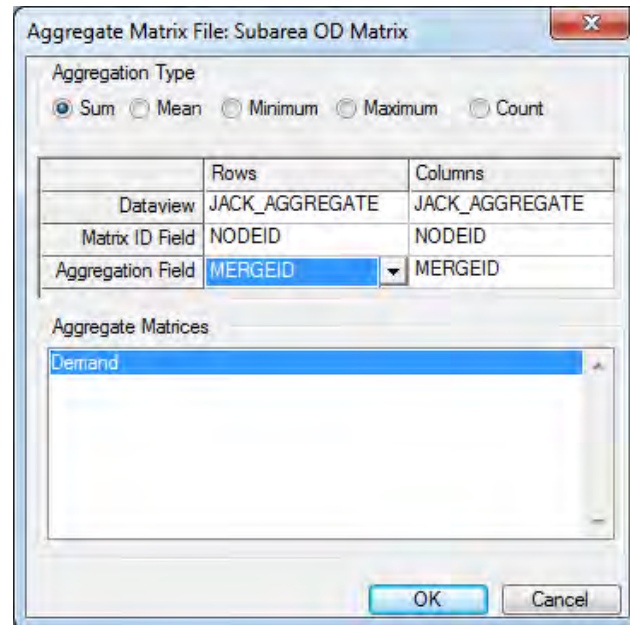

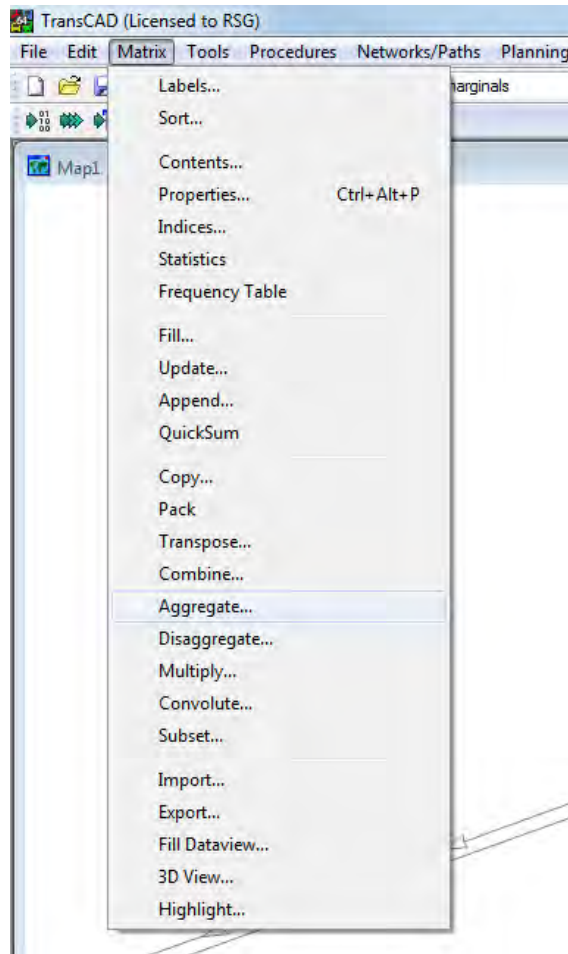

The diagram shows a green circle with a vertical line passing through its center. Two red arrows originate from the circle: one points towards the left table (Aggregate) and the other points towards the right table (Disaggregate), illustrating the relationship between the two data sets.

# ATRI Desire Lines

# ATRI Desire Lines

## **ATRI vs. Transearch and What the Differences Mean**

# A Trip by Any Other Name...

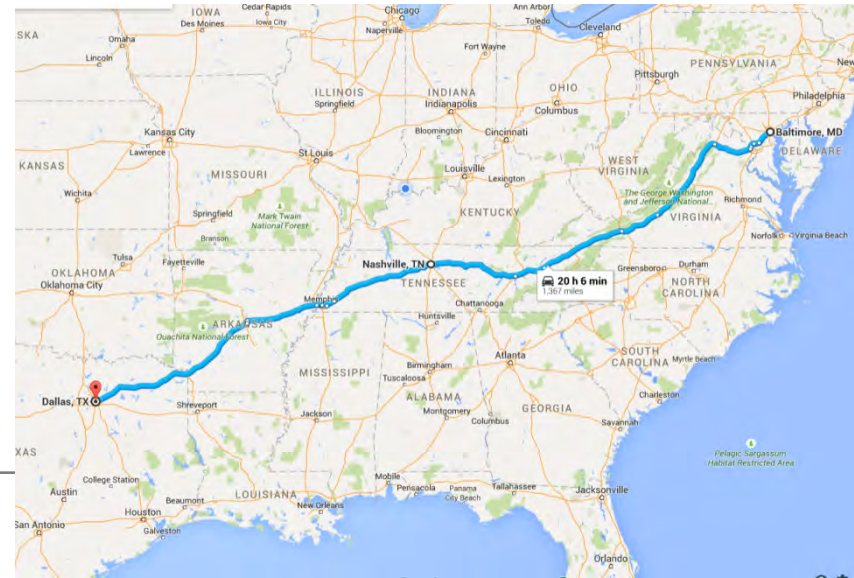

- Key difference between ATRI & Transearch in how a truck trip is defined
- **Transearch:** truck trip = from where a truck picks up goods to where it delivers them
- **ATRI:** truck trip = from when a truck starts traveling to when it stops for more than a few minutes / at a light

# An Example

- A truck picks up goods in Baltimore, drives to Nashville and must take an hours of service break and rest for several hours, then continues on and delivers goods in Dallas
- Transearch sees one trip from Baltimore to Dallas
- ATRI sees two trips, one from Baltimore to Nashville, one from Nashville to Dallas
- For Nashville, this means 1 EE trip vs. 2 EI/IE trips

# Which is right?

- Good News – both trip tables will produce nearly identical truck loadings on the network (assuming the only difference is trip definition)
  - Neither is right / wrong in this sense
- One difference – ATRI will give better (higher) truck volumes on ramps
- Only challenge is using the two together

# What it means for you

- If you use static truck trip tables or a truck-based (QFRM style) model for trucks, you can just use the ATRI data directly
  - either as a static truck trip table (frataring for the future) or
  - to update/re-estimate your truck models or
  - use your models to pivot off of the ATRI base year trip table

# What it means for you

- If you have a commodity flow-based model you may need to carefully consider how best to wed this with/incorporate ATRI data.
  - You may still be able to use commodity flow-based growth to pivot off a base year ATRI trip table. This should produce reasonable network flows, but the trip table will have trips using both definitions.
  - You could alternatively process your commodity flow trip table to add intermediate stops. This will produce a consistent trip table but would introduce complexity and could introduce error.

## One Other Note – Fratarling to Externals

- You may want to fratar your ATRI truck trip table to match your external station truck counts exactly. As delivered the trip table should generally be close but won't match exactly, if there are any significant differences, fratarling could produce a likely more accurate trip table and better loadings.

## Update on Phase 3

# AirSage Districts

- Developed Districts for AirSage data
  - 1223 total, 1092 in TN; ~ 3:1 vs TAZ

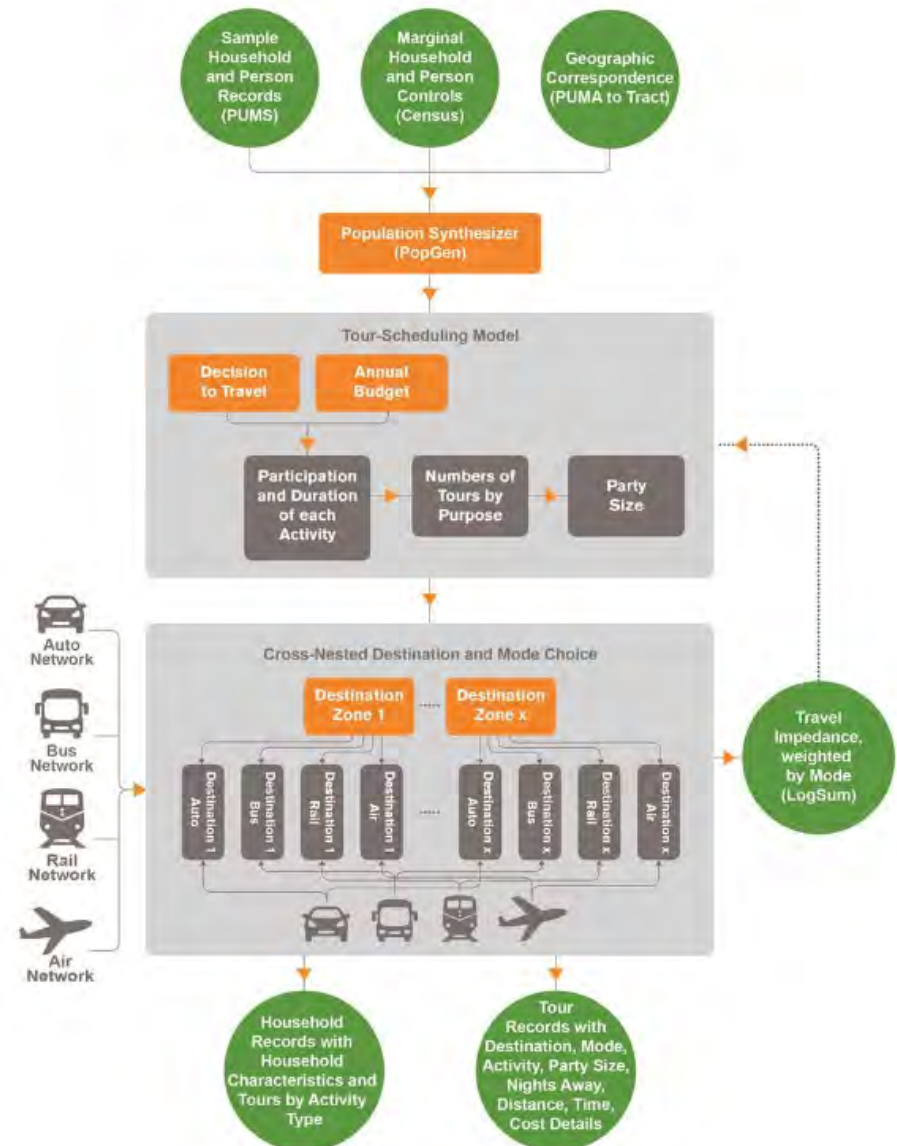

# AirSage Evaluation

- Will test AirSage expansion
- Probably August

# National Long Distance Model Integration

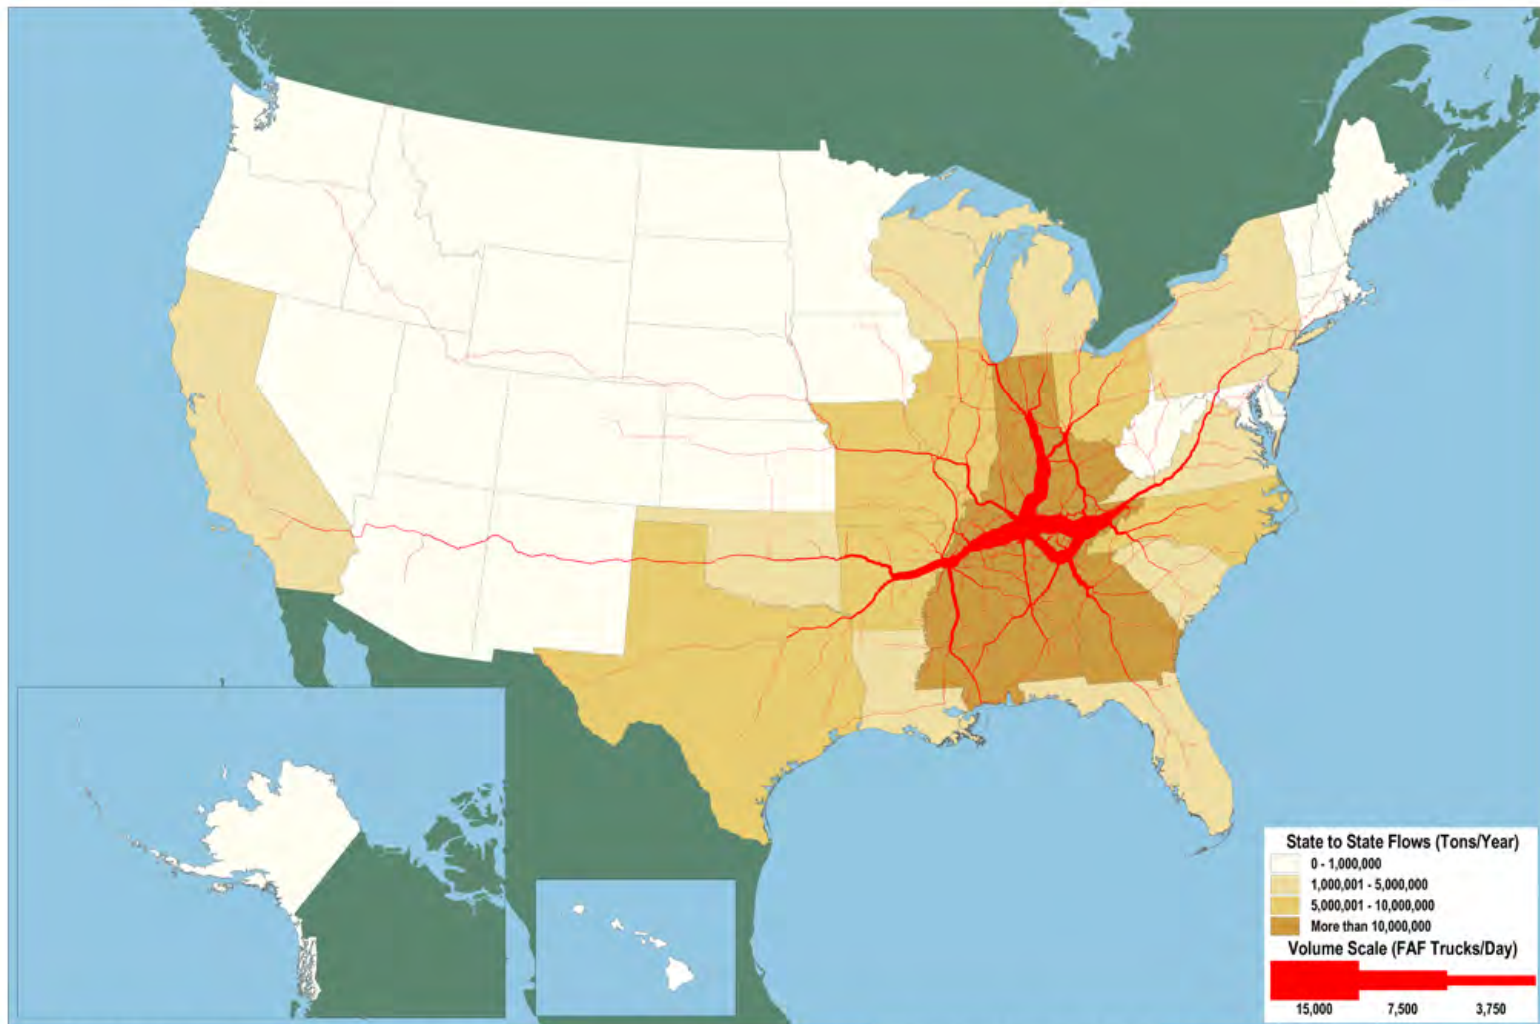

- Pivot off of AirSage-based base year long distance trip table using FHWA's new National Long Distance Passenger Travel Demand Model

## Update on Freight Models

# Major Flows by Truck (FAF - to/from/within TN, 2010)

Note: Major flows include domestic and international freight moving by truck on highway segments with more than twenty five FAF trucks per day and between places typically more than fifty miles apart.

Source: U.S. Department of Transportation, Federal Highway Administration, Office of Freight Management and Operations, Freight Analysis Framework, version 3.4, 2012.

# Major Flows by Truck (FAF - to/from/within TN, 2040)

Note: Major flows include domestic and international freight moving by truck on highway segments with more than twenty five FAF trucks per day and between places typically more than fifty miles apart.

Source: U.S. Department of Transportation, Federal Highway Administration, Office of Freight Management and Operations, Freight Analysis Framework, version 3.1.2, 2011.

# Truck Ton-miles, FAF vs. Transearch 2012

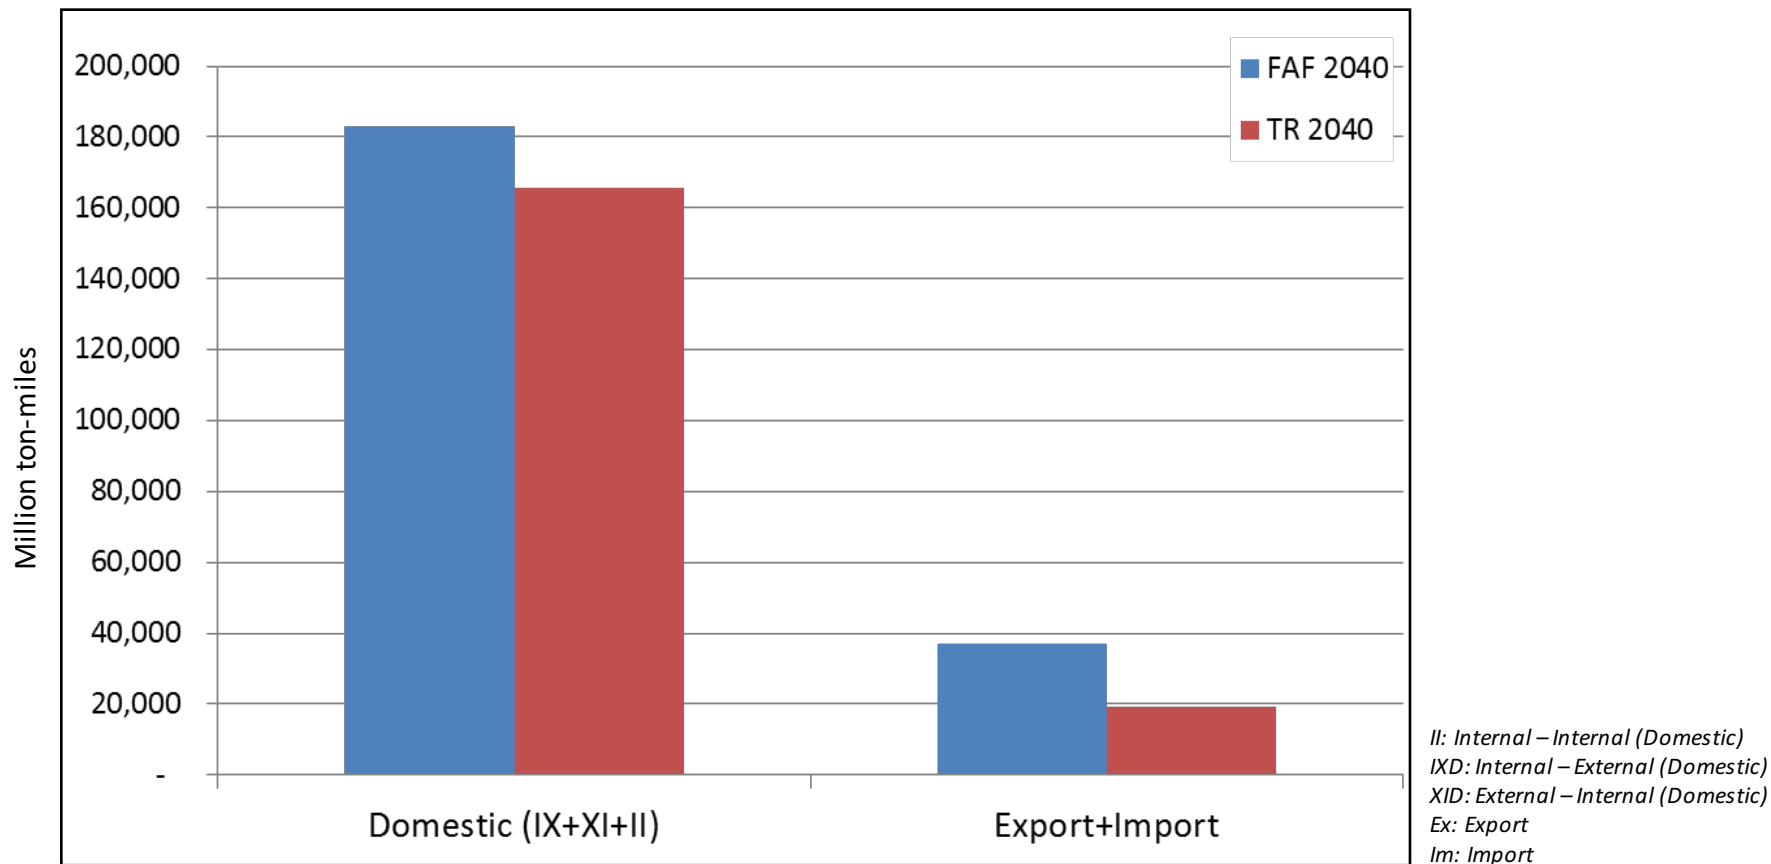

*domestic vs. foreign movements*

Note: FAF data includes Truck, Rail, Water and Air (excludes "Multiple Modes, Pipeline and Unknown modes) and Transearch includes Truck, Rail, Water and Air

# Truck Ton-miles, FAF vs. Transearch 2040

*domestic vs. foreign movements*

Note: FAF data includes Truck, Rail, Water and Air (excludes "Multiple Modes, Pipeline and Unknown modes) and Transearch includes Truck, Rail, Water and Air

# Truck Ton-miles, FAF vs. Transearch 2012

*by segment*

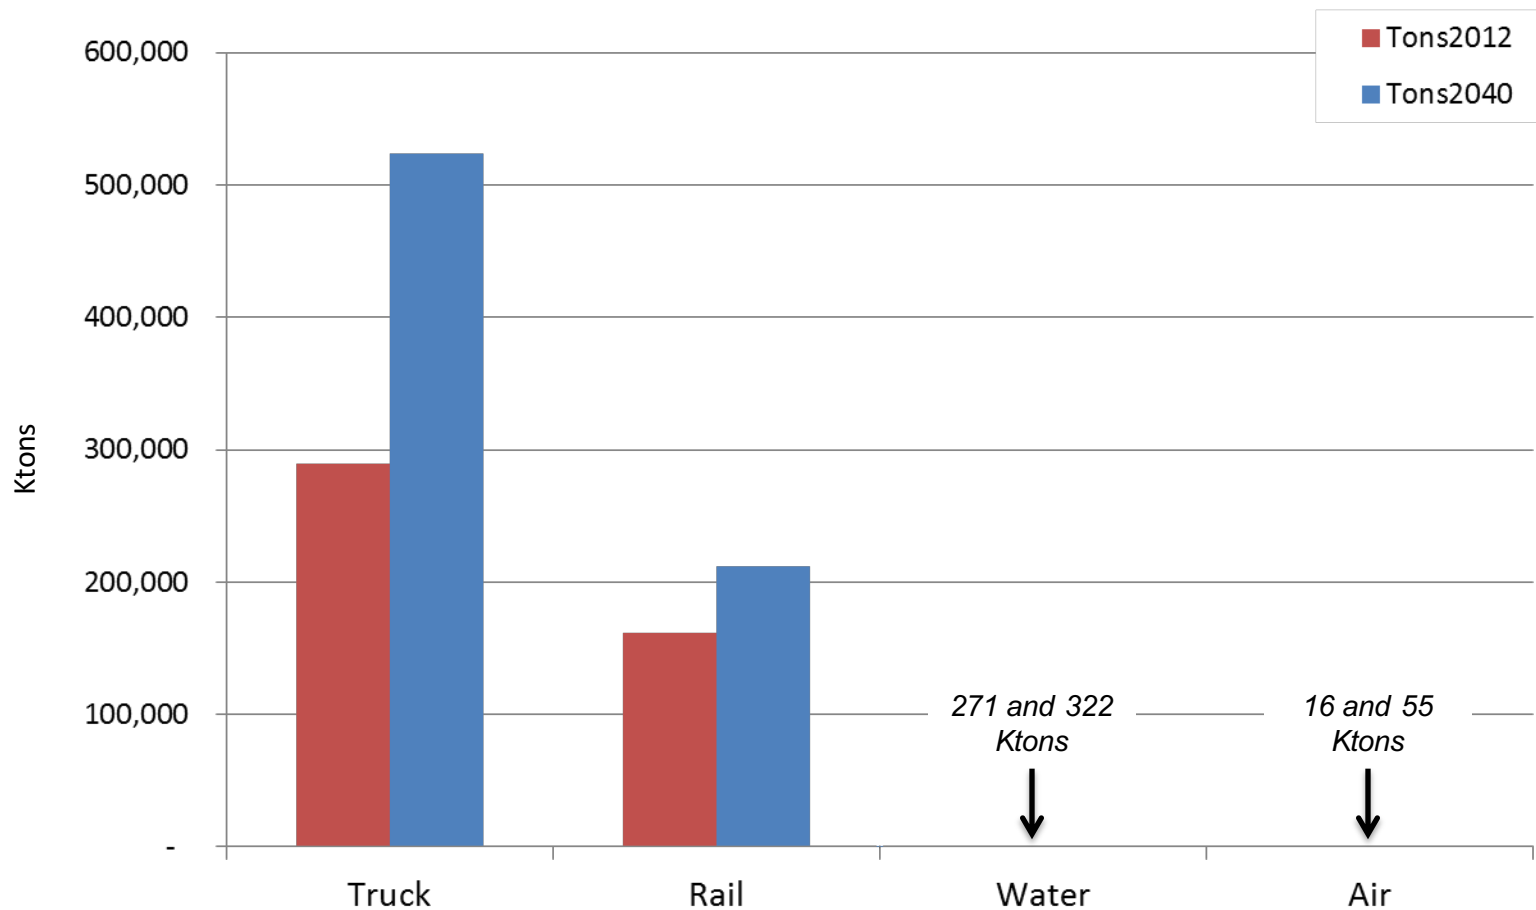

Note: FAF data includes Truck, Rail, Water and Air (excludes "Multiple Modes, Pipeline and Unknown modes) and Transearch includes Truck, Rail, Water and Air

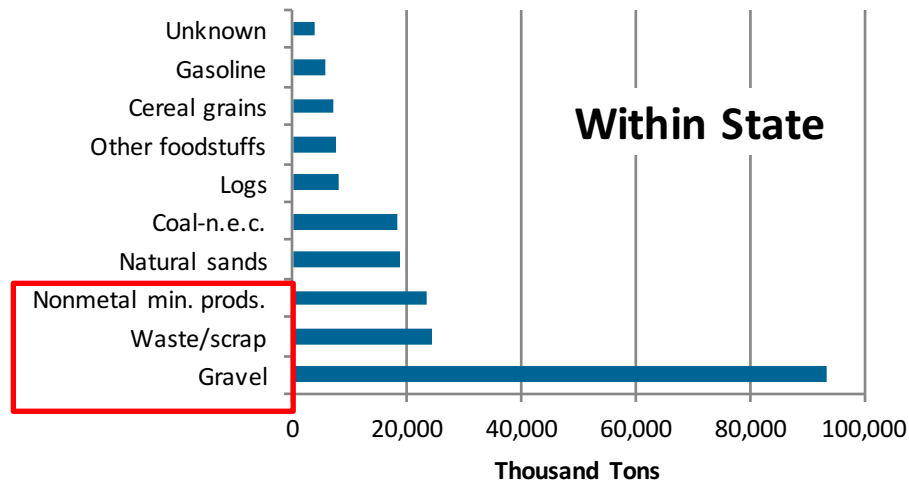

# Transearch Through Movements 2012 and 2040

*by mode*

# TN State Top Commodities (FAF 2012 by tons)

# TN State Top Commodities (FAF 2012 by value)

## Growth Comparison (2012 – 2040)

| Growth (%)        | FAF         | TR          |
|-------------------|-------------|-------------|
| II                | 47%         | 76%         |
| IXD               | 114%        | 43%         |
| XID               | 53%         | 83%         |
| Ex                | 274%        | 187%        |
| Im                | 227%        | 113%        |
| <i>avg growth</i> | <i>143%</i> | <i>100%</i> |

# Top Commodities Movement (to/from/within TN)

FAF data

- About %90 of Natural Sands and %65 of Gravel are moving *within* the state
- More than %80 of Waste/scrap move *within* the state
- More than %40 of Chemical Products and Plastic/rubber move *from* the region

# Top Commodities Movement (to/from/within TN)

Transearch data

- *Very different from FAF data distributions*
- *Basic Chemicals, Chemical Products and Gravel mostly move **to/from** the state (~%50)*
- *About %70 of the Coal, Cereal Grains and Natural Sands are moving **to** the state*

# Mode Shares FAF vs. Transearch (by tons)

# Transearch **Through** Movements **2012**

*Top commodities by tons*

## XXD (domestic through movements)

| Commodity Group         | Tons<br>(Ktons) | Value<br>(million \$) |
|-------------------------|-----------------|-----------------------|
| <i>Coal</i>             | 54,531          | 1,997                 |
| <i>Gravel</i>           | 48,366          | 465                   |
| <i>Other foodstuffs</i> | 20,343          | 21,406                |
| <i>Other ag prods.</i>  | 18,103          | 11,998                |
| <i>Cereal grains</i>    | 14,941          | 2,866                 |

## XXIE (import/export through movements)

| Commodity Group        | Tons<br>(Ktons) | Value<br>(million \$) |
|------------------------|-----------------|-----------------------|
| <i>Coal</i>            | 7,047           | 258                   |
| <i>Other ag prods.</i> | 5,943           | 3,861                 |
| <i>Base metals</i>     | 4,036           | 14,146                |
| <i>Coal-n.e.c.</i>     | 3,153           | 2,341                 |
| <i>Plastics/rubber</i> | 2,912           | 9,108                 |

# Transearch **Through** Movements 2040

*Top commodities by tons*

## XXD (domestic through movements)

| Commodity Group         | Tons<br>(Ktons) | Value<br>(million \$) |
|-------------------------|-----------------|-----------------------|
| <i>Gravel</i>           | 83,718          | 825                   |
| <i>Coal</i>             | 34,671          | 1,272                 |
| <i>Other foodstuffs</i> | 31,482          | 33,354                |
| <i>Plastics/rubber</i>  | 25,509          | 76,132                |
| <i>Other ag prods.</i>  | 24,273          | 15,190                |

## XXIE (import/export through movements)

| Commodity Group        | Tons<br>(Ktons) | Value<br>(million \$) |
|------------------------|-----------------|-----------------------|
| <i>Other ag prods.</i> | 22,194          | 13,972                |
| <i>Plastics/rubber</i> | 10,056          | 31,907                |
| <i>Coal</i>            | 8,468           | 311                   |
| <i>Base metals</i>     | 8,052           | 21,600                |
| <i>Basic chemicals</i> | 7,618           | 12,983                |

# T-100 Air Data

*Air freight tons to and from TN*

## Top Destination States

## Top Origin States

- Main destinations for air freight (CA, TX, FL, NY and NJ) accounting for about %35 of all IX tons
- Main origins for air freight (CA, TX, FL, AK and NJ) accounting for about %37 of all XI tons
- Memphis airport (MEM) handles about 98% of all air freight tons (TYS and BNA each about 1%, and MQY about 1% of foreign tons)
- About 45% of MEM international import tons coming in from Asia and about 60% of export tons going to Canada and Mexico

# Commodity Flow Models

- Continue generation model development
  - Equations being estimated for all 43 SCTG commodity for production and consumption using Transearch
  - Using some advanced outlier-detection methods (Cook's Distance) & robust regression
- Assignment test of Transearch/FAF distributions
  - Requires completion & use of generation models
  - Hope to begin early August
  - Will determine form of distribution models and how Transearch and FAF datasets will be used, but will still have to make decision about growth

## Update on Passenger Models

# Passenger Models

- Continue trip generation model development (July)
- Resume work on destination choice models (late July)
- Begin simple mode choice model development (August)

# Highway Network

- Delayed by Steve Trevino's paternity leave & waiting on data (INRIX)
- Status of INRIX data?
- Need to get grade signs & vertical clearance from TRIMS – want to use latest – how to request/obtain?
- Also, need auxiliary lanes from TDOT

# Trip Generation Estimation

- Estimating trip generation equations from combined NHTS/MPO HH survey data
- Using discrete regression models

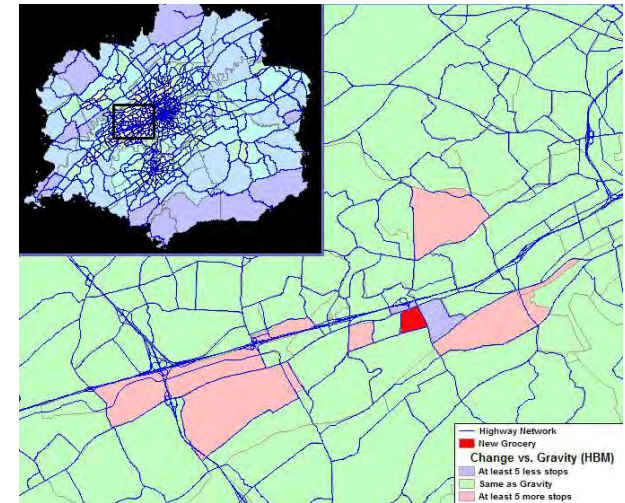

$$T_P = \sum_n \beta_1 x_{1n} + \sum_m \beta_2 x_{2m}$$

- Allows diminishing returns (ln transforms) & interaction terms (joint distributions)
- Avoid aggregation bias & population synthesis
- Modeling distribution of explanatory variables
  - Based on mean/median
  - Testing distributional assumptions – Poisson, negative binomial, etc.

# Destination Choice Models

## Account for More Factors

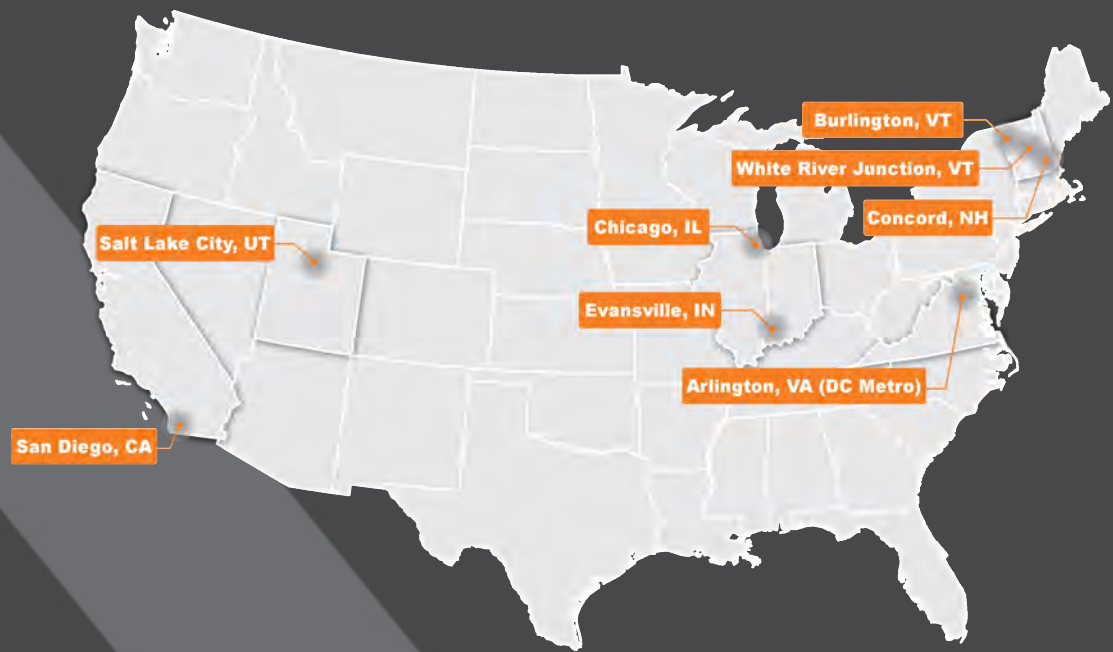

- Number of Attractions
- Travel Time / Impedance
- Effect of Residence Location on Willingness to Travel
- Psychological Boundaries
  - River Crossings
  - Ridgeline Crossings
  - Major Highway Crossings
  - State / County Line Crossings
- Walkability of Destination
- Mixture of Land Uses at Destination
- Convenience for Trip-Chaining
- Spatial Auto-correlation Effects

**Trip Chaining in Knoxville**

**Fewer, Longer Rural Trips  
More, Shorter Urban Trips**
