

Truck GPS Data to Support Transportation Planning

Presentation at Tennessee Model User's Group
July 15, 2015

Mihalis M. Golias, Sabyasachee Mishra, Maxim Dulebenets, and Karlis Pujats
Department of Civil Engineering and Intermodal Freight Transportation Institute
University of Memphis

Contents

- Commercial Vehicle GPS Data
- Data Description
- Tools to support probe vehicle use in transportation planning
- Freight Performance Measures

Commercial Vehicle GPS Data

GPS devices are widely deployed in cell phones, and trucks

Truck fleet operators subscribe to GPS services for operational and maintenance purposes

Automatic Vehicle Location (AVL); Events Activated Tracking Systems (EATS); Fleet Telematics Systems (FTS)

Entities (e.g., ATRI) collect and store historical GPS from operators (2004 to present)

Condition of dissemination is that truck ID's are anonymized

GPS information should be processed before it can be used for truck travel models

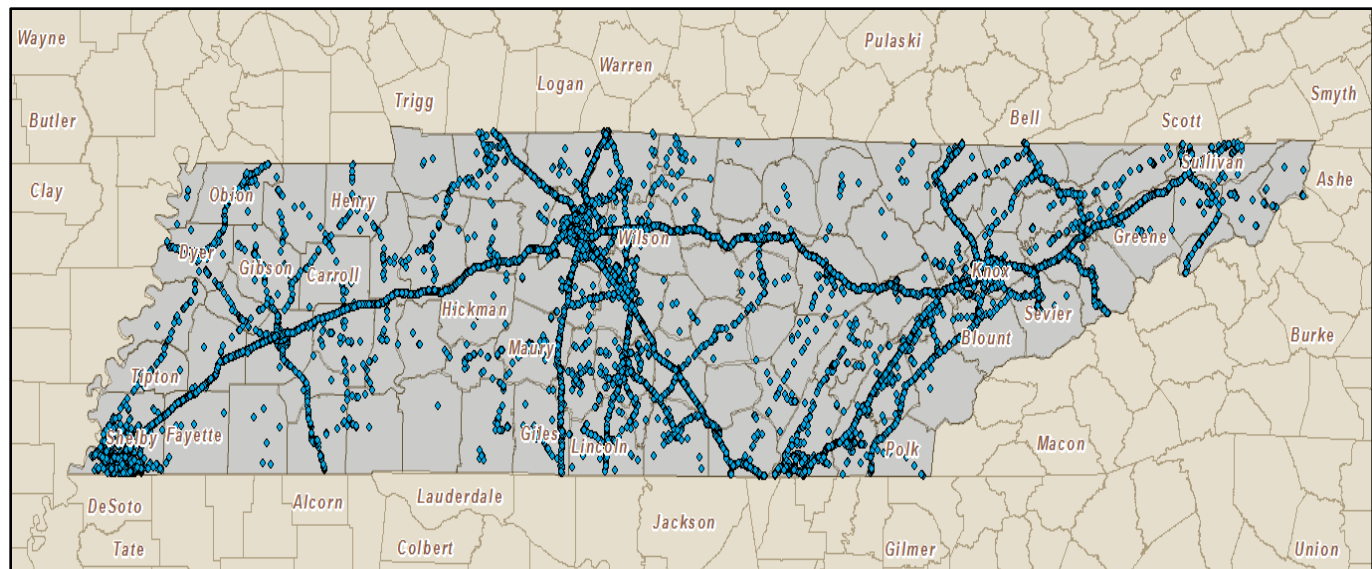

From Computer Desktop Encyclopedia
© 2007 The Computer Language Co., Inc.

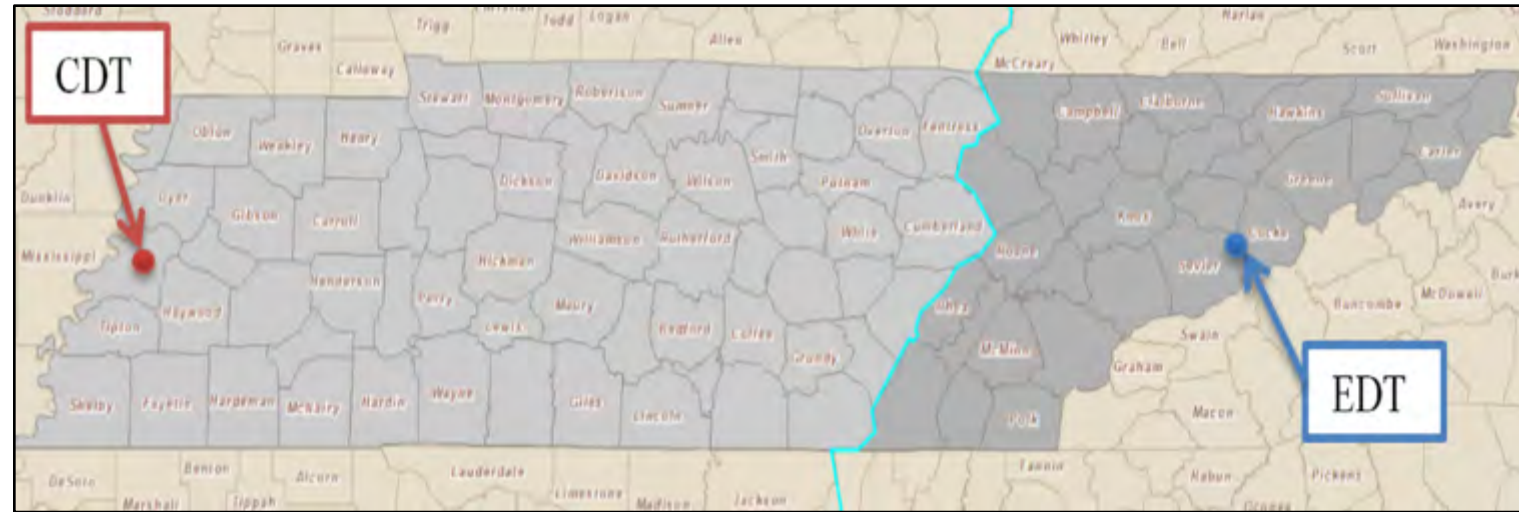

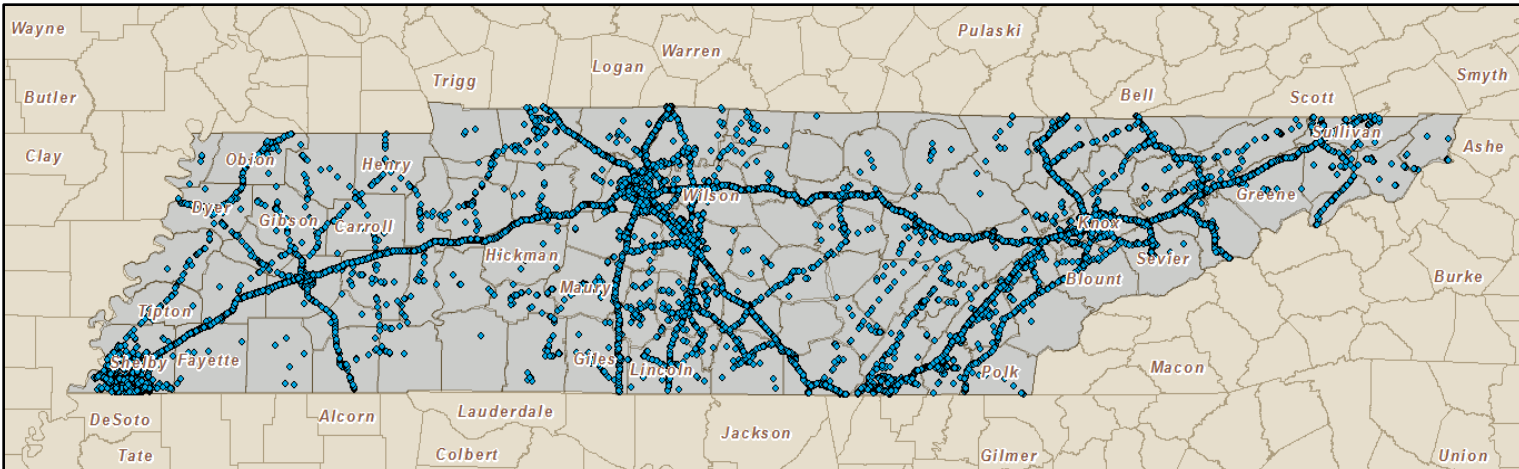

What do GPS devices provide?

- X and Y coordinates
- time stamp
- heading
- spot speed
- Vehicle ID
- Other data (e.g., emissions exist but not provided)

One Day of GPS Data

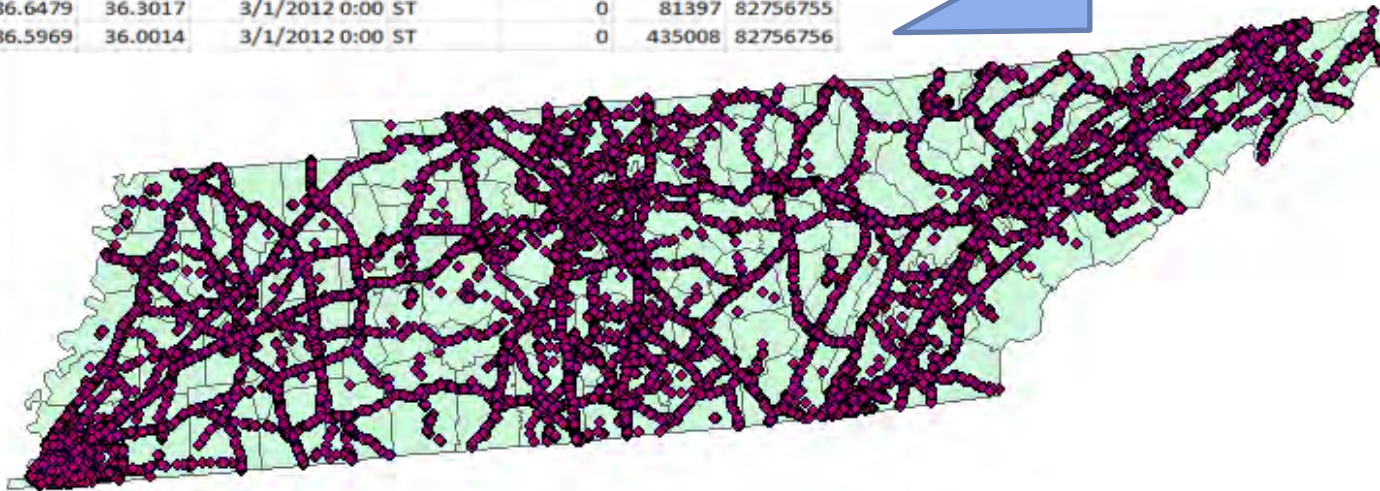

Statistics

- 60,962 unique truck id's (whole 2012)
- 104,232,699 observations
- Maximum number of observations for a truck in a day: 1501
- Maximum hourly observations for a truck: 394(stopped), 356 (moving)

Quarter	Percentage
Jan-March	22.27%
April-June	24.86%
July-Sept	26.2%
Oct-Dec	26.67%

Observation to Link

- Use function “NEAR” to associate (or snap) an observation with the closest link

Source: ArcGIS Resource Center

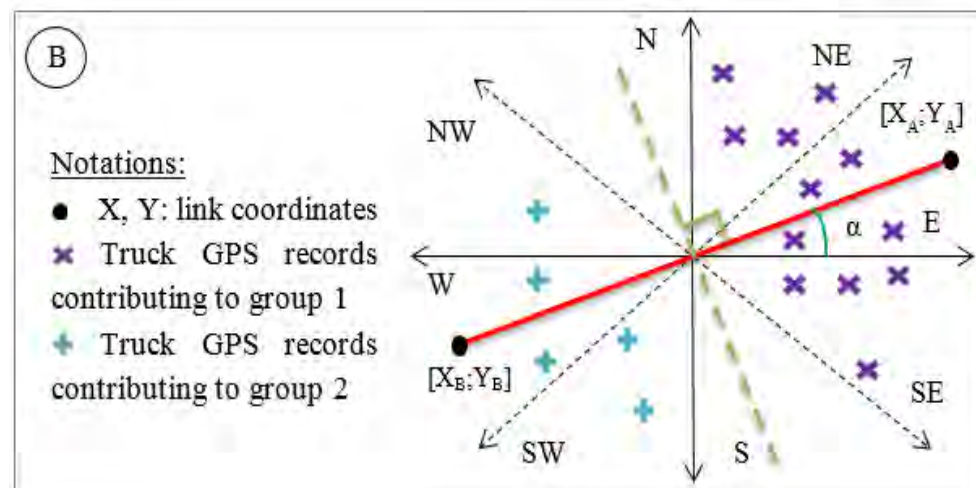

Direction Assignment

- Up to eight possible headings can be associated with a link: E, W, N, S, NE, NW, SE, and SW.

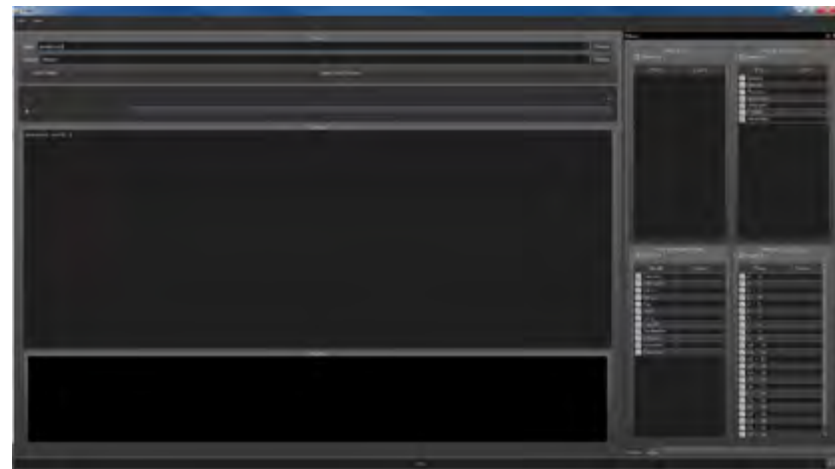

Direction and Outlier Identification (DOI)

- Designed to separate snapped observations in two groups
- Estimates bi-directional link freight performance measures (FPMs)

Data Processing

- Handle large datasets (4-5GB)
- Descriptive information
- Develop GIS and Excel files
- Query by Year, Month, Day, Time of Day
- Adjust for Time Zone

Estimated FPMs

- Travel Speed (in each direction)
- Travel Time (TT)
- TT reliability measures
 - 90th percentile TT
 - 95th percentile TT
 - Buffer TT (BTT)
 - BTT index (BI)
 - TT standard deviation
 - TTCV
 - TT range
 - mean/median TT ratio

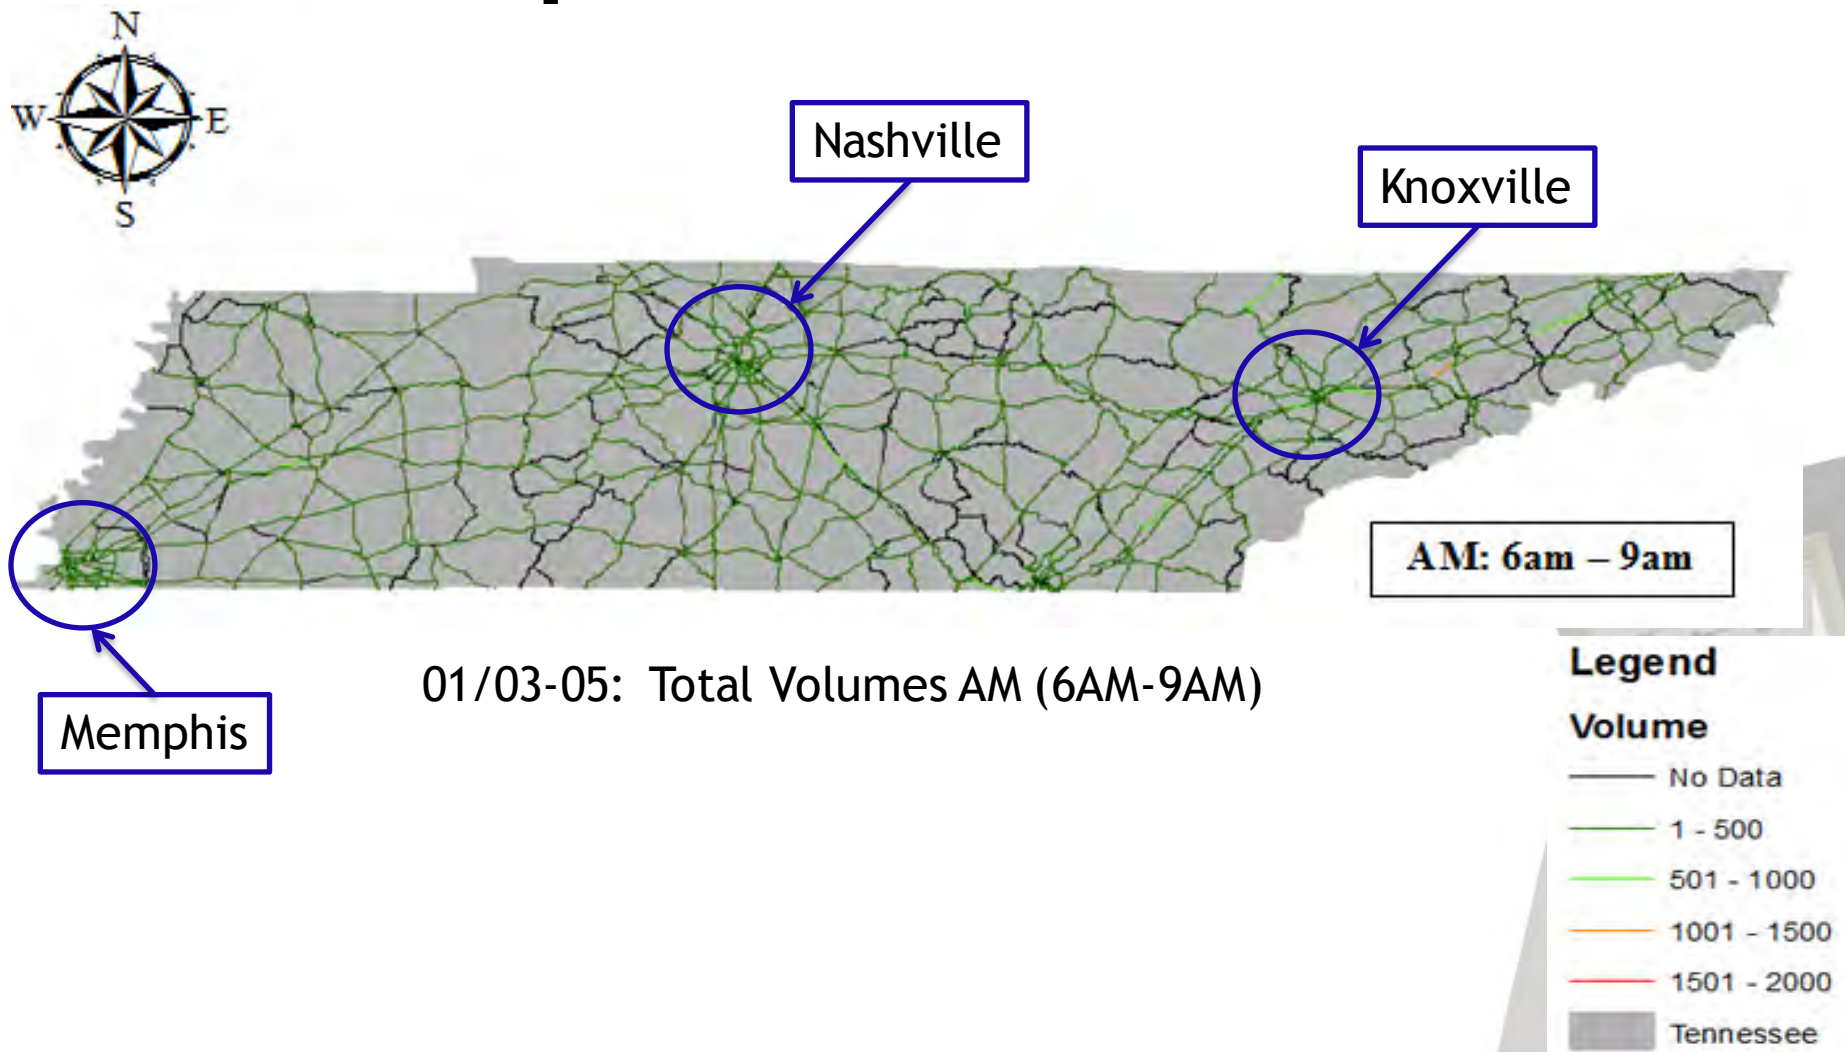

ArcGIS Toolbox

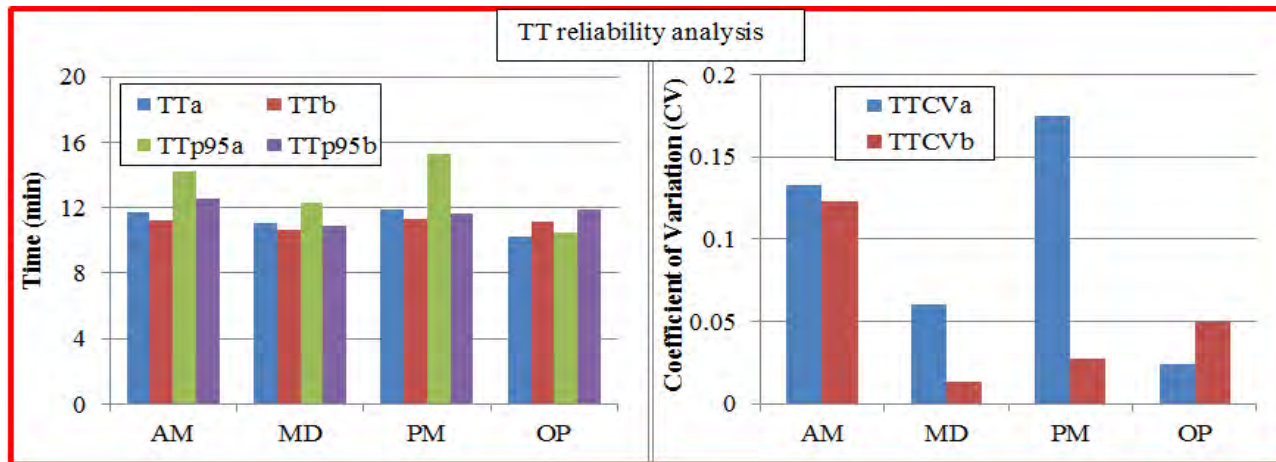

FPM Example: Mean Speed Link

FPM Example: Link Total Volumes

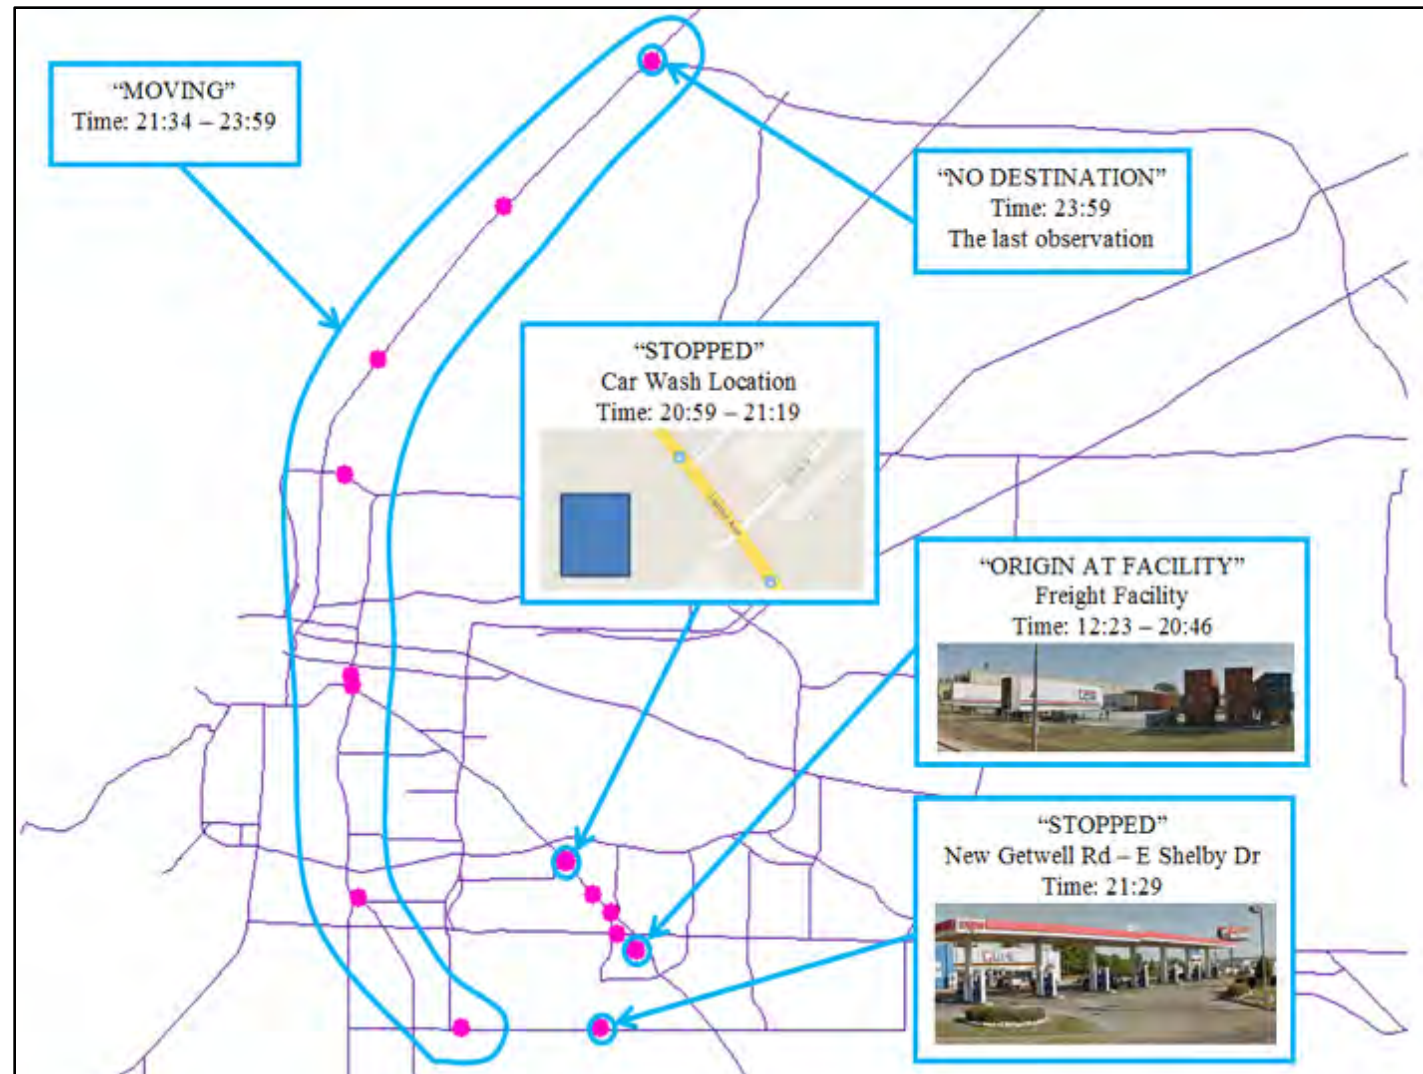

TT Reliability Measures

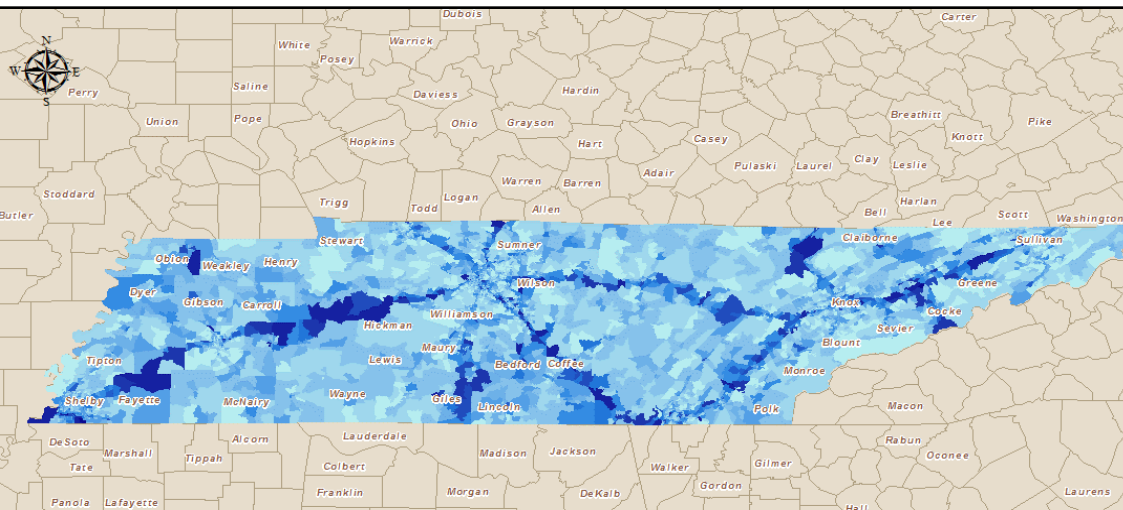

Note: TTa – travel time in North East direction; TTb – travel time in South West direction; TTp95a – 95th percentile travel time in North East direction; TTp95b – 95th percentile travel time in South West direction; TTCVa – travel time coefficient of variation in North East direction; TTCVb – travel time coefficient of variation in South West direction;

Limitations of GPS Data

- Sample size (small and varies by area)
- Error in GPS devices
- Limited attributes
 - Proprietary nature of the data

In progress

- Truck parking utilization (on- and off- site)
- Safety
- Capacity reliability
- Recurring and non-recurring freight corridor reliability
- Freight and land use integration
- TDM Calibration/Validation

Agency Acknowledgement

- Tennessee Department of Transportation
